Emergence Of The Modern European World From The Sixteenth To The Twentieth Century:

The Oxford Handbook of Early Modern European History, 1350-1750 Hamish M. Scott, 2015 This Handbook re-examines the concept of early modern history in a European and global context. The term early modern has been familiar especially in Anglophone scholarship for four decades and is securely established in teaching, research, and scholarly publishing. More recently, however, the unity implied in the notion has fragmented while the usefulness and even the validity of the term and the historical periodisation which it incorporates have been questioned. The Oxford Handbook of Early Modern European History 1350-1750 provides an account of the development of the subject during the past half century but primarily offers an integrated and comprehensive survey of present knowledge together with some suggestions as to how the field is developing. It aims both to interrogate the notion of early modernity itself and to survey early modern Europe as an established field of study. The overriding aim will be to establish that early modern is not simply a chronological label but possesses a substantive integrity. Volume I examines Peoples and Place, assessing structural factors such as climate, printing, and the revolution in information, social and economic developments, and religion, including chapters on Orthodoxy, Judaism, and Islam. **The Rise and Fall of the National Atlas in the Twentieth Century** John Rennie Short, 2022-07-12 Between 1900 and 2000 more than seventy countries produced a national atlas, an official or quasi-official rendering of the nation-state in maps and accompanying text. This book considers the reasons behind and characteristics of this state-sponsored cartographic explosion. These national atlases mirror and embody some of the important themes of this turbulent century, including the complex connections between nation-state and territory, the rise of state-sponsored science, the growth of nation-states, colonialism, and postcolonialism, and the geography of biopolitics. **Spaces of Global Knowledge** Diarmid A. Finnegan, Jonathan Jeffrey Wright, 2016-03-09 Global knowledge was constructed, communicated, and contested during the long nineteenth century in numerous ways and places. This book focuses on the life geographies, material practices, and varied contributions to knowledge by medical or botanical cartographers or cultural actors whose lives crisscrossed an increasingly connected world. Integrating detailed archival research with broader thematic and conceptual reflection, the individual case studies use local specificity to shed light on global structures and processes, revealing the latter to be lived and experienced phenomena rather than abstract historiographical categories. This volume makes an original and compelling contribution to a growing body of scholarship on the global history of knowledge. Given its wide geographic disciplinary and thematic range, this book will appeal to a broad readership, including historical geographers and specialists in history of science and medicine, imperial history, museum studies, and book history. **The Routledge Companion to Early Modern Europe, 1453-1763** Chris Cook, Philip Broadhead, 2012-10-02 This compact and highly accessible work of reference covers the broad sweep of events as Europe transformed during the period from the Renaissance to the Enlightenment. This Companion examines the centuries that saw the Reformation and Counter Reformation, the expansion of Europe, and the beginnings of imperialism and enormous

changes in the way government and kingship were conducted With a wealth of chronologies tables family trees and maps this handy book is an indispensable resource for all students and teachers of early modern history **The Practice of Global**

History Matthias Middell,2019-08-22 Over recent decades almost every area of historical study has seen its global turn from consumption to finance from politics to migration from social order to cultural patterns This volume reflects the vibrant state of global history scholarship in Europe and examines to what extent global history is practiced and conceptualised distinctively within Europe Drawing together contributions from scholars from France Germany Hungary the Netherlands Switzerland and the UK the book offers a sweeping overview of the state of the field In particular the contributors look at histories of colonialism and imperial expansion knowledge circulation and mobility across borders This book reflects the diversity of current scholarship on global and transnational history and will offer important insights for anyone interested in understanding the cutting edge of research in this area **A History of Europe** A. Creating the Florentine State Samuel K. Cohn, Jr,1999-12-09 This book offers a comprehensive approach to the study of the political history of the Renaissance its analysis of government is embedded in the context of geography and social conflict Instead of the usual institutional history it examines the Florentine state from the mountainous periphery a periphery both of geography and class where Florence met its most strenuous opposition to territorial incorporation Yet far from being acted

upon Florence's highlanders were instrumental in changing the attitudes of the Florentine ruling class the city began to see its own self interest as intertwined with that of its region and the welfare of its rural subjects at the beginning of the fifteenth century Contemporaries either remained silent or purposely obscured the reasons for this change which rested on widespread and successful peasant uprisings across the mountainous periphery of the Florentine state hitherto unrecorded by historians
