Vaucher, 1986-01-01 [Dictionary of Trees, Volume 2: South America](#) M.M. Grandtner, Julien Chevette, 2013-09-21 Dictionary of South American Trees provides a single source reference for botanists biologists ecologists and climatologists on the many native trees in South America The index lets readers find a tree in four languages by its common name or abbreviation followed by taxonomy that includes common uses for each part of the tree Using this information scientists and students can identify and classify plants their growth structure and environment the uses of their products and alternative options with similar characteristics Complete coverage of all native South American trees the only single source reference for botanists biologists ecologists and climatologists

Vaucher,1986 *Elsevier's Dictionary of Trees* M.M. Grandtner,2005-06-06 This dictionary will present all currently accepted generic specific sub specific and variety names of trees excluding fossil and more recently extinct taxa hybrids and cultivars Only the indigenous trees of a continent those wild species that were natural elements of the spontaneous forest vegetation before the arrival of Europeans or other colonizers are included Each generic entry includes the family to which it is assigned the synonyms of the Latin name and the English French Spanish trade and other names For the English and French names the standard name is listed first followed by other available names with in parentheses the countries where they are used Where appropriate names in additional languages are also included Each infrageneric species subspecies variety entry includes in addition the distribution height type of foliage ecological characteristics and main uses of the tree when available In this volume only taxa indigenous on the North American continent are included considered in a geographical not in a political sense This means from Alaska and Greenland to Panama including Caribbean but excluding Hawaii **Elsevier's Dictionary of Chemoetymology** Alexander Senning,2006-10-30 Noting a marked lack of comprehensiveness and or contemporaneity among typical reference works on chemical etymology as well as a somewhat spotty coverage of chemical terms and their etymology in comprehensive dictionaries and textbooks the author decided to write an up to date desk reference on chemical etymology which would satisfy the needs of casual readers as well as those of more demanding users of etymological lore Characteristic user friendly features of the present work include avoidance of cumbersome abbreviations avoidance of entries in foreign alphabets and a broad coverage of all chemical disciplines including mineralogy Biological medical geological physical and mathematical terms are only considered where they appear of interest to mainstream chemists This book does not provide definitions of terms unless required in the etymological context nor guidance as to the timeliness of different nomenclature systems The typical user will from the outset be well aware of the exact meaning of the terms he or she focuses on and only require the etymological background to be used Examples of sources which have been drawn upon in the preparation of this book apart from the extremely useful Internet resource Google are listed but an exhausting enumeration would be tiresome and impractical an up to date desk reference on chemical etymology characteristic user friendly features broad coverage of all chemical disciplines [Guide to Information Sources in the Botanical Sciences](#) Elisabeth B. Davis,Diane Schmidt,1995-12-15 Works cited in this useful survey are appropriate for students librarians and amateur and professional botanists These

encompass the plant kingdom in all its divisions and aspects except those of agriculture horticulture and gardening The majority of the annotations are for currently available in print or electronic reference works A comprehensive author title and a separate subject index make locating specific entries simple With materials ranging from those selected for the informed layperson to those for the specialist this new edition reflects the momentous transition from print to electronic information resources It is an appropriate purchase for public college university and professional libraries

Elsevier's Dictionary of Herpetological and Related Terminology D.C. Wareham, 2005-01-19 The dictionary is a compilation of clear concise and informative definitions of the characteristic vocabulary commonly encountered and used by herpetologists when discussing reading or writing about reptiles and amphibians It is intended for all those who have an interest in these animals from the amateur hobbyist who may find himself faced with what can be a rather intimidating scientific term or technical expression to the trained zoologist who may sometimes have doubts over the exact meaning of a particular term It will it is hoped not only be a useful source of reference to all who are either actively or passively involved in some aspects of herpetology whether they be keepers curators breeders researchers teachers or students but an interesting read as well

Elsevier's Dictionary of Geography Vladimir Kotlyakov, Anna Komarova, 2006-12-20 Geography is a system of highly developed sciences about the environment Geographical science embracing the study of the Earth's physical phenomena people and their economic activities has always been in need of an extensive terminology Geographical terms are related to the terms of natural sciences physics chemistry biology geology etc and humanities history economics sociology etc since geography is based on these fundamental subjects Geography includes a number of disciplines and subdivisions which appeared along with the development of the science In spite of being very different geographical disciplines have some common tools of investigation which is maps comparative method of exploration remote sensing geoinformation systems Today very well developed terminologies of all the specialist fields of geography and related subjects exist in the main world languages However they are not always well correlated Nowadays geographical terminology requires unification and international correlation more than ever before Hence the idea of compiling a multilingual polydisciplinary dictionary The Dictionary consists of the basic table of terms arranged according to the order of the English alphabet with each term numbered Each entry consists of the term in English and its equivalents in Russian French German Spanish Short definitions of terms are given in English and in Russian The terms are supplied with the necessary grammar labels such as gender of nouns plural number etc The Dictionary combines two functions that of a defining dictionary and that of a bilingual dictionary These two functions are basically contradictory because usually the defining dictionary is aimed at giving one meaning of the word which is the main and essential one while the bilingual dictionary tries to give different equivalents of a given word in the other language in order to supply the user with maximum possible translations differing in the shades of meanings thus giving him the possibility to choose the appropriate word But in our Dictionary we intentionally decided to combine the two

functions defining and multilingual because a short definition of the term and equivalents in other languages help to achieve our main aim which consists in showing the basic geographical terminology and harmonizing it in several languages Having this into consideration we deliberately mixed two types of dictionaries in one Organized alphabetically via English Provides short definition of geographical terms in English and Russian Includes multilingual translation of terms from English to Russian French German Spanish **Elsevier's Dictionary of Soil Science** A. Canarache,I.I. Vintila,I.

Munteanu,2006-10-17 This dictionary includes some 9200 terms each with a definition and often and additional descriptive text in English the terms being translated in French German and Spanish It is more complete than similar previously published dictionaries or glossaries and contains all fields of soil science as well as some adjacent fields of other earth sciences agriculture and engineering Present concepts and definitions are detailed along with earlier concepts not only for historical reasons but also for developing new ideas Concepts terms and definitions usual in literature of various countries are discussed and compared to offer an appropriate exchange of ideas Soil classifications and methodologies for soil investigation coming from a score of European American and other countries and international organisations are presented and correlations between names of soil taxa in different classifications are suggested Readers active in all branches of soil science will find accessible answers to many of their questions either directly referring to procedures used in the organisations where they work or related to way of thinking in other countries Readers active in other branches but needing information on soils will also find answers to this dictionary of great assistance to their research Over 9200 terms with definitions in English and translations in French German Spanish Includes all fields of soil science and many connected sciences All present day terminology with inclusion of earlier classical concepts and terms Terminology in current USDA Soil Taxonomy FAO World Reference Base or Soil Resources and other documents from different countries Granted the N Cernescu award from the Romanian Academy on Agricultural and Forestry Sciences **Tree Magic** Sandra

Trees and Wood in Dendrochronology Fritz H. Schweingruber, 2012-12-06 The science of dendrochronology has grown significantly in the past 20 years In the 1950s and 1960s interest in the subject was limited to only a handful of scientists who perceived in dendrochronology a *l art pour l art* Today however specialists from many different fields recognize and are pursuing the problems of dendrochronology Tree ring research has acquired a permanent role in the various sciences of archeology history geology ecology and climatology The founders of dendrochronology themselves were of varied scientific backgrounds and interests For example A E Douglass in the United States was an astronomer B Huber in Germany a forest biologist and F N Shvedov in Russia a climatologist Today the spectrum is even broader Many dendrochronologists are authorities in mathematics archeology history forestry botany wood technology

ecology geography geology etc It is therefore understandable that it has become almost impossible for one individual to encompass the entire field Bitvinskas 1974 Fritts 1976 Schweingruber 1983 and Mitsutani 1990 have attempted each guided by his own interests to provide at least an overview of the field Recently individual aspects have been presented by groups of authors in books edited by Fletscher 1978 Hughes et al 1982 Jacoby and Hornbeck 1987 and Bradley and Jones 1992 It is very likely that in the future summaries covering each branch of dendrochronology will be published *Dictionary of Dictionaries* Thomas Kabdebo,1992 **Elsevier's Dictionary of Reptiles** Murray Wrobel,2004-12-04 This dictionary gives an overview of the English German French and Italian names of reptiles The basic table contains the scientific names of families genera species and some sub species with their identified names which are given in the singular for species and sub species and in the plural for other terms **Bibliography of Agriculture** ,1990 *Unasyuva* ,1986 **Edible Medicinal And Non-Medicinal Plants** Lim T.
