everywhere and Holland shows how a theory of emergence can predict many complex behaviours in art and science This book will appeal to scientists and anyone interested in scientific theory **Emergence** John H. Holland,1999-04-23 In this important book John H Holland dramatically shows us that the emergence of order from disorder has much to teach us about life mind and organizations Creative activities in both the arts and the sciences depend upon an ability to model the world The most creative of those models exhibits emergent properties so that what comes out is more than what goes in From the ingenious checkers playing computer that started beating its creator in game after game to the emotive creations of the poet Emergence shows that Holland s theory successfully predicts many complex behaviors in art and science *Johan Ludvig Heiberg* Jon Bartley Stewart,2008 The polymath Johan Ludvig Heiberg 1791 1860 represented in many ways a kind of crossroads in the Danish Golden Age where many different figures and cultural institutions converged Although he has been studied for years in his native Denmark he has not enjoyed the same reception abroad Recently however his work has begun to catch the eye of international scholars and largely as a result of their efforts Heiberg has now become a familiar name among the most recent generation of Anglophone and international researchers working in fields such as Scandinavian literature Danish theater history and Kierkegaard studies However Heiberg was one of the most versatile figures of his age and the full scope of his activity and thought is still far from being adequately explored in the literature The present collection features articles from leading Danish and international experts that reflect the different dimensions of Heiberg s thought The volume is thus interdisciplinary in an attempt to cover as many different aspects of Heiberg s intellectual activity as possible It is divided into four rubrics I Philosophy II Literature and Criticism III Drama and Aesthetics and IV Politics and Social Criticism The hope is that this collection will encourage students and scholars to further explore the different dimensions of Heiberg s thought both on its own terms and in connection with other important figures such as S ren Kierkegaard and Hans Christian Andersen *The Order of Things* Alister E. McGrath,2008-04-15 Provocative and immensely well informed The Order of Things represents a substantial and original contribution to the fields of systematic theology historical theology and the science and religion dialogue Leading theologian Alister E McGrath explores how the working methods and assumptions of the natural sciences can be used to inform and stimulate systematic theology Written by one of today s best known Christian writers Explores how the working methods and assumptions of the natural sciences can be used to inform and stimulate systematic theology Continues McGrath s acclaimed exploration of scientific theology begun with his groundbreaking three volume work A Scientific Theology Includes a landmark extended analysis of whether

doctrinal development can be explained using Darwinian evolutionary models and exploration of how the transition from a scientific theology to a future scientific dogmatics might be made Supported by a published review of McGrath s scientific theology project which is currently the best brief introduction to his thought Thematics Reconsidered Frank Trommler,1995 Responding to a new interest in thematic studies the volume features essays by some of the leading scholars from the United States and Europe In honor of Horst S Daemmrich the co author with Ingrid Daemmrich of the handbook Themes and Motifs in Western Literature the contributors reassess both in theory and in case studies the viability of thematics as part of contemporary literary criticism They demonstrate the broad scope of methodologies between strict systematization of themes and motifs and reader response conceptions of theming Special topics include a thematology of the Jewish people motifs in folklore a cluster on madness hysteria and mastery the story of Judith Cinderella thematics in Durrenmatt and Isaac Babel chaos as a theme A concluding chapter illuminates aspects of nineteenth century literary history

Technen: Elements of Recent History of Information Technologies with Epistemological Conclusions Andrzej Piotr Wierzbicki, 2014-07-25 The book expresses the conviction that the art of creating tools Greek techne changes its character together with the change of civilization epochs and co determines such changes This does not mean that tools typical for a civilization epoch determine it completely but they change our way of perceiving and interpreting the world There might have been many such epochs in the history of human civilization much more than the three waves of agricultural industrial and information civilization This is expressed by the title Technen of the book where n denotes a subsequent civilization epoch During last fifty years we observed a decomposition of the old episteme understood as a way of creating and interpreting knowledge characteristic for a given civilization epoch of modernism which was an episteme typical for industrial civilization Today the world is differently understood by the representatives of three different cultural spheres of strict and natural sciences of human and social sciences especially by their part inclined towards postmodernism and technical sciences that have a different episteme than even that of strict and natural sciences Thus we observe today not two cultures but three different episteme The book consists of four parts First contains basic epistemological observations second is devoted to selected elements of recent history of information technologies third contains more detailed epistemological and general discussions fourth specifies conclusions The book is written from the cognitive perspective of technical sciences with a full awareness and discussion of its differences from the cognitive perspective of strict sciences or human and social sciences The main thesis of the book is that informational revolution will probably lead to a formation of a new episteme The book includes discussions of many issues related to such general perspective such as what is technology proper what is intuition from a perspective of technology and of evolutionary naturalism what are the reasons for and how large are the delays between a fundamental invention and its broad social utilization what is the fundamental logical error using paradoxes that are not real only apparent of the tradition of sceptical philosophy what are rational foundations and examples of emergence of order out of chaos whether civilization development based on two positive feedbacks between science technology and the market might lead inevitably to a self destruction of human civilization etc Latent Utopias Zaha Hadid, Patrik Schumacher, 2002
