

EINSTEIN'S SPACE & VAN GOGH'S SKY PHYSICAL REALITY AND BEYOND

LAWRENCE LESHAN & HENRY MARGENAU

"If theoretical physicists and psychologists actually get together for once, and work out the implications of modern physics, the implications they draw are startling and could be revolutionary for modern psychology. An exciting book."

Einsteins Space And Van Goghs Sky Physical Reality And Beyond:

Einstein's Space and Van Gogh's Sky Lawrence L. LeShan, Henry Margenau, 1982 A History of Management Thought Morgen Witzel, 2016-12-16 Of all the sciences and social sciences management is the one that most deliberately turns its back on the past Yet management as we know it today did not spring into life fully formed Management has more than just a present it also has a past and a future and all three are inextricably linked This book charts the evolution of management as an intellectual discipline from ancient times to the present day Contemporary management challenges including sustainability technology and data and legitimacy are analysed through an historical lens and with the benefit of new case studies The author helps readers understand how the evolution of management ideas has interacted with changes in society By framing management s history as one of challenge and response this new edition is the perfect accompaniment for students and scholars seeking meaningful study in the business school and beyond Essential reading as a core textbook in management history the book is also valuable supplementary reading across the humanities and social sciences **The Pattern of Evil** Lawrence LeShan Ph.D., 2006-01-23 If we wish to learn from the Holocaust how to act against a recurrence we must ask what the SS thought they were doing as they organized and ran the horrific camps Then we can know how to watch for early signs of the emergence of this type of thinking and move against it This book addresses itself to this problem and arrives at new answers Modern science and philosophy have gradually become aware of the degree to which human beings use different sets of assumptions about the nature of reality how things are and work in different situations As this book demonstrates when the Mythic world picture is used to solve political problems instead of the appropriate Sensory world view the concentration camp becomes a possibility The process however is not inexorable but can be aborted if understood **What Number Is God?** Sarah Voss, 1995-07-01 The ancient Greeks held that number rules the universe and that God ever geometrizes Here author Sarah Voss explores the historical connection between mathematics and religion in her provocative book What Number Is God Citing many examples she shows that humankind has long used mathematics metaphorically to understand and make sense of life s most fundamental questions As Voss shows contemporary society also uses metaphors of mathematics to investigate such issues though in a fashion that is frequently overlooked or denied The intentional use of contemporary mathematical ideas as metaphors for metaphysical notions can have a dramatic impact on modern society in part by providing new symbols to replace old religious language which has lost its power to excite *The Pattern of Evil* Lawrence Leshan, 2006 If we wish to learn from the Holocaust how to act against a recurrence we must ask what the SS thought they were doing as they organized and ran the horrific camps Then we can know how to watch for early signs of the emergence of this type of thinking and move against it This book addresses itself to this problem and arrives at new answers Modern science and philosophy have gradually become aware of the degree to which human beings use different sets of assumptions about the nature of reality how things are and work in different situations As this book

demonstrates when the Mythic world picture is used to solve political problems instead of the appropriate Sensory world view the concentration camp becomes a possibility The process however is not inexorable but can be aborted if understood

The Neural Basis of Free Will Peter Tse,2013 The issues of mental causation consciousness and free will have vexed philosophers since Plato This book examines these unresolved issues from a neuroscientific perspective In contrast with philosophers who use logic rather than data to argue whether mental causation or consciousness can exist given unproven first assumptions Tse proposes that we instead listen to what neurons have to say Because the brain must already embody a solution to the mind body problem why not focus on how the brain actually realizes mental causation Tse draws on exciting recent neuroscientific data concerning how informational causation is realized in physical causation at the level of NMDA receptors synapses dendrites neurons and neuronal circuits He argues that a particular kind of strong free will and downward mental causation are realized in rapid synaptic plasticity Recent neurophysiological breakthroughs reveal that neurons function as criterial assessors of their inputs which then change the criteria that will make other neurons fire in the future Such informational causation cannot change the physical basis of information realized in the present but it can change the physical basis of information that may be realized in the immediate future This gets around the standard argument against free will centered on the impossibility of self causation Tse explores the ways that mental causation and qualia might be realized in this kind of neuronal and associated information processing architecture and considers the psychological and philosophical implications of having such an architecture realized in our brains **Designing XR** Peter (Zak)

Measuring in Weighted Environments Garuti Claudio,2014-02-01 The group s decision is usually understood to be the reduction of different individual preferences among objects in a given set to a single collective preference or group preference In recent years the researchers have tended to concentrate on the analysis of decisions that are reasonable from certain point of view rather than on how group choices are in fact made This book focuses on the most complex decision making structures in which several persons are involved in the decision making process of which each has not only one decisional criterion but several In addition these criteria are incommensurables which are usually the case in reality Particularly it addresses the problem of measuring in weighted decision making environments using the concept of compatibility of priority vectors
