EJB 2.1 Kick Start Peter Thaggard, 2002 A detailed workbook that includes coverage of the latest specifications for XHTML CSS and JavaScript as well as a comprehensive overview of server side Web programming technologies this edition was written by a team of experienced Web development practitioners led by the author of JavaScript Unleashed and Pure JavaScript

BEA WebLogic Workshop 8.1 Kick Start Al Saganich, Sunila Srivatsan, 2004 Written by leading members of BEA's Education team this book offers concise practical coverage of the real world problems Workshop can solve for J2EE developers It includes developing page flows and JSP applications using tag libraries building controls developing Web services processing XML data and BEA's new XML Beans classes handling security and deploying applications to production 336 pp

Sams Teach Yourself JavaServer Pages 2.0 with Apache Tomcat in 24 Hours Mark Wutka, Alan Moffet, Kunal Mittal, 2004 The Compact Framework brings familiar NET development to mobile devices This technology enables millions of Microsoft programmers to develop Windows CE applications Written by two Microsoft Compact Framework team members

Struts James Turner, Kevin Bedell, 2002 Learn to build applications with Jakarta Struts the most popular JSP development framework Struts Kick Start is a hands on book filled with sample applications and code snippets you can reuse and in depth coverage of new features in Struts 1.1 If you are looking for a practical book that shows you how to do it then Struts Kick Start is for you Plus it's the first Struts book with detailed examples of the major Struts tags The book begins with a discussion of Struts and its Model View Controller MVC architecture The authors then demonstrate Struts power through the development of a non trivial sample application covering all the Struts components in a how to use them approach You'll also see the Struts Tag Library in action use tags for HTML javaBeans logical operations and more You'll learn to use Struts with JBoss for EJBs with Apache Axis to publish and use Web Services and with JUnit for testing and debugging The authors work with the latest Struts 1.1 features including DynaForms Tiles and the Validator The book includes a CD ROM containing the tools discussed in the book Struts 1.1 beta 2 Java 2 Standard Edition JBoss 3.0.3 MySQL 3.23 XDoclet Torque Tomcat Ant Axis Cactus and JUnit Plus it comes with an electronic fully searchable version of the book From the Inside Cover Thoroughly covers the essential features of Struts in a clear and readable style Struts Kick Start is a solid starting point for learning how to develop web applications using Struts The authors start you off by reviewing the foundational technologies on which Struts is based and immediately get into the sorts of practical how to information and examples that get you up to speed quickly Notable features that I really appreciated include the coverage on integration with other technologies such as EJBs and web services using Ant to set up your development environment and the fact that the software goodies you need are available on the included CD Struts does not live in a vacuum it is one of the tools in the developer's toolkit so knowing how it works with other technologies is very useful Of particular importance is the coverage on testing your web application as you build and maintain it Developing a solid testing methodology and a substantial suite of tests to protect yourself against

regressions is critically important to a rapid development cycle that still needs to produce high quality applications Coverage of testing though tends to be minimal in many books about programming technologies James and Kevin provide specific advice on how to use the JUnit and Cactus testing frameworks with your Struts based applications Struts Kick Start is a good resource for learning about Struts and it will help you get up to speed quickly Craig McClanahan Creator of Struts *BEA WebLogic Workshop* Joe Weber, Mark Wutka, 2003 BEA WebLogic Workshop is a rapid application development tool that makes building Java based Web service applications simple With just a basic foundation of Java programming you can use WebLogic Workshop to develop Web services BEA WebLogic Workshop Kick Start provides everything you need to get started with WebLogic Workshop including a quick Java primer and appendixes covering the essentials of XML SOAP and WSDL Learn the features of WebLogic Workshop and review hundreds of code examples and explore the inner workings of this new tool The book's CD ROM contains all the source code and examples from the book plus a 90 day trial version of BEA WebLogic Platform which includes WebLogic Workshop Foreword Web services have attracted much attention recently as the next big thing in computing technology Vendors of all shapes and sizes have announced their support for Web services technologies and every month a new Web services conference is popping up somewhere on the globe With all this hype and attention sometimes it's difficult to really discover what Web services are where they fit in your company what the business case is and how you can actually get started taking advantage of this technology BEA has been working with customers to answer many of these questions and provide solutions that enable companies to easily construct Web services that meet their needs today Contrary to the common conception of Web services as a consumer focused technology Web services may have the greatest potential as a technology inside enterprises as a new way of tying disparate applications together using standards based technologies To make Web services really work in the enterprise however it's essential that they meet core enterprise requirements Web services applications have to exist in a constantly changing IT environment where different applications are built and modified by different people on different schedules They must accommodate everything from modern J2EE based applications to legacy systems to applications at business partners They must be able to handle rich and complex information and transmit it between internal and external applications They must easily interact with other applications to leverage existing investments They must be robust reliable and they must perform Perhaps most important of all they have to be easy to build For Web services to flourish within an organization all developers will need to be able to build Web services that meet these requirements BEA WebLogic Workshop Kick Start introduces you to BEA's new WebLogic Workshop product a development tool and runtime framework that makes it easy to build powerful Web services that take advantage of the robust enterprise features of the WebLogic J2EE application server WebLogic Workshop provides a graphical tool that makes it easy to visualize develop and test Web service applications and visual controls that dramatically simplify access to existing resources like databases packaged applications Enterprise Java Beans and other Web services The

Workshop framework provides out of the box support for building Web services that are loosely coupled so that the internal implementation details of an application can be cleanly separated from the public contract that a Web service offers to other applications. This makes Workshop Web services flexible in the face of a constantly changing IT environment. Workshop also provides built-in support for asynchronous messaging so that Web service applications can carry on rich two-way conversations with their clients and accommodate interaction with legacy systems and human users. Finally, Workshop supports easy manipulation of coarse-grained messages so that rich documents can be handled without resorting to tedious XML DOM programming. All of these capabilities can be accessed in a simple declarative fashion that enables all developers, not just J2EE experts, to get started building Web services today. Even if you are new to the Java programming language or have never built a J2EE application before, I think you will be surprised how easy it is to get started with Workshop. Working inside the WebLogic Workshop environment, you can focus on the procedural business code that is important to getting your applications built and leave all of the details of Web service and J2EE plumbing to the application framework. BEA WebLogic Workshop Kick Start will give you an introduction to Web services in general and teach you the few Java and J2EE concepts you will need to know along the way. Rich with examples, this book illustrates the power of Web services and will help you realize the value they can bring to your company. Carl Sjogreen, Product Manager, WebLogic Workshop, BEA Systems Inc.

Spring Persistence -- A Running Start Mark Fisher, Solomon Duski, 2009-03-27. Published with the developer in mind, firstPress technical briefs explore emerging technologies that have the potential to be critical for tomorrow's industry. Apress keeps developers one step ahead by presenting key information as early as possible in a PDF of 150 pages or less. Explore the future through Apress with *Spring Persistence: A Running Start*. This firstPress title gets readers rolling with the various fundamental Spring Framework Java Persistence concepts and offerings as well as proven design patterns for integrating Spring Persistence functionality for complex and transaction-based enterprise Java applications. The Java platform offers several options for saving long-lived information, including JPA, Java Persistence API, Hibernate, iBatis, JDBC, and even JCR, Java Content Repository, a standard for interfacing with a content management system. This book helps readers decide which persistence solution is the most ideal for their application requirements and shows how Spring can be leveraged to simplify the integration of their selected persistence framework into their enterprise application. *BEA WebLogic Server 8.1*
