With Wayne Bennett From the silky wax qualities of the surfaces of some quartz menhirs to the wood grain textures of others to the golden honeycombed limestones of Malta to the icy frozen waves of the Cambrian sandstone of south east Sweden this book investigates the sensuous material qualities of stone Tactile sensations sonorous qualities colour and visual impressions are all shown to play a vital part in our understanding of the power and significance of prehistoric monuments in relation to their landscapes In *The Materiality of Stone* Christopher Tilley presents a radically new way of analyzing the significance of both cultural and natural stone in prehistoric European landscapes Tilley's groundbreaking approach is to interpret human experience in a multidimensional and sensuous human way rather than through an abstract analytical gaze The studies range widely from the menhirs of prehistoric Brittany to Maltese Neolithic temples to Bronze Age rock carvings and cairns in southern Sweden Tilley leaves no stone unturned as he also considers how the internal spaces and landscape settings are interpreted in relation to artifacts substances and related places that were deeply meaningful to the people who inhabited them and remain no less evocative today In its innovative approach to understanding human experience through the tangible rocks and stone of our past *The Materiality of Stone* is both a major theoretical and substantive contribution to the field of material culture studies and the study of European prehistory
