Neurochemical transmission accounts for the majority of information transfer both in the central and peripheral nervous system The initial findings centred around the experimental work of the two Nobel Prize winners Sir Henry H Dale and Otto Loewi as well as Wilhelm Feldberg Their historical findings opened the door to further investigations and extended the list of neurotransmitters to many others such as amino acids peptides purines and nitric oxide In the first part the publication provides fascinating insights into the life of the three scientists Their personality and scientific approach are presented through autobiographical sketches and personal memories by authors Various comments and details of the atmosphere in the laboratory complete the picture of the conditions at the time The second part is dedicated to the history of the substances such as neurotransmitters their antagonists and analogues The stories of these substances are presented to the reader in a succinct way including many anecdotes and unusual events on the way to their therapeutic application A Karger Publishing Highlights 1890 2015 title **Control of Membrane Function: short-term and long-term** J.M. Bolis,2012-12-02 A critical factor in cell to cell interactions is the presence in the cell membrane of highly specific ion channels controlled by specific receptors that are bound to and activated by a gamut of external hormones and neurotransmitters Through both this action on ion channels and action on other membrane components such as G proteins extracellular signals alter intracellular events usually through the mediation of second messengers and so provide the basis for the transduction mechanism connecting extracellular signals with intracellular effectors This volume deals with the various ways that such membrane function is controlled **Current Catalog** National Library of Medicine (U.S.), First multi year cumulation covers six years 1965 70
