Wherrett, 1987 From Optical Bistability Towards Optical Computing Paul Mandel, Stanley Desmond Smith, Brian S. Wherrett, 1987 Optical Bistability III Hyatt M. Gibbs, Paul Mandel, Nasser Peyghambarian, S. Desmond Smith, 2012-12-06 This is a collection of papers presented at the Topical Meeting on Optical Bistabi Tity OB3 held December 2 4 1985 in Tucson Arizona The increase in attendance to almost 200 shows that interest continues to grow in the subject of optical bistability OB and its wider implications both in application to optical digital computing and to basic physics notably instabilities and spatial effects The maturing of the field is evidenced by the fact that the number of experimental papers has caught up with the number of theoretical ones These trends were already apparent in OB2 and the 1984 Royal Society Meeting on Optical Bistabilty Dynamical Nonlinearity and Photonic Logic Progress in experiment al topics included guided wave OB mostly ther mal picol econd switching studies on quite a number of new materials op tical computing and pattern recognition using arrays of nonlinear etalons Theoretical progress ranged from rather practical calculations on device per formance noise effects on switching and transverse and longitudinal spatial effects to fundamental studies of dynamics instabilities and chaos The Conference also included both theoretical ideas on optical computer archit ecture and intrinsic OB circuit elements such as as full adder as well as the first demonstration of an intrinsic optical circuit in the form of a cas cadable loop with bufferd st ores A first demostration of a simple pattern recognition algorithm using 2 D arrays of spots on a ZnSe int erference filter Circuit Cavity QED with Macroscopic Solid-State Spin Ensembles Stefan Putz, 2017-10-05 This thesis was reported combines quantum electrical engineering with electron spin resonance with an emphasis on unraveling emerging collective spin phenomena The presented experiments with first demonstrations of the cavity protection effect spectral hole burning and bistability in microwave photonics cover new ground in the field of hybrid quantum systems. The thesis starts at a basic level explaining the nature of collective effects in great detail It develops the concept of Dicke states spin by spin and introduces it to circuit quantum electrodynamics QED applying it to a strongly coupled hybrid quantum system studied in a broad regime of several different scenarios It also provides experimental demonstrations including strong coupling Rabi oscillations nonlinear dynamics the cavity protection effect spectral hole burning amplitude bistability and spin echo Journal of the Optical Society of America ,2001 spectroscopy The Department of Defense Critical **Technologies Plan** United States.
