The Economic Value of Biodiversity David Pearce, Dominic Moran, 2013-11-05 Biodiversity loss is one of the major resource problems facing the world and the policy options available are restricted by inappropriate economic tools which fail to capture the value of species and their variety This study describes in non technical terms how cost benefit analysis techniques can be applied to species and species loss and how they provide a measure of the efficiency of conservation measures Only when conservation can be shown to pass such a basic economic test the authors claim will it be incorporated into policies David Pearce has also written *Blueprint for a Green Economy*

A Philosopher Looks at the Natural World Daniel C. Fouke, 2021-08-10 This book interweaves the author's personal story and observations of nature with scientific research and philosophical reflection It tells the story of nearly three decades of labor to ecologically restore twenty one acres of ruined land near Dayton Ohio This story and what the author has observed motivate reflection on the human relationship to soil the inner lives of animals the intelligence of plants and human psychology The book advances the case for the intelligence and kinship of all living things an ethic of respect for life and the need to radically rethink how human societies live on Earth

International Environmental Law, Policy, and Ethics Alexander Gillespie, 2014 This second edition of *International Environmental Law Policy and Ethics* revises and expands this groundbreaking study into the question of why the environment is protected in the international arena This question is rarely asked because it is assumed that each member of the international community wants to achieve the same ends However in his innovative study of international environmental ethics Alexander Gillespie explodes this myth He shows how nations like individuals create environmental laws and policies which are continually inviting failure as such laws can often be riddled with inconsistencies and be ultimately contradictory in purpose Specifically he seeks a nexus between the reasons why nations protect the environment how these reasons are reflected in law and policy and what complications arise from these choices This book takes account of the numerous developments in international environmental law and policy that have taken place the publication of the first edition most notably at the 2002 World Summit on Sustainable Development and the 2012 Rio 20

United Nations Conference on Sustainable Development Furthermore it addresses recent debates on the economic value of nature and the problems of the illegal trade in species and toxic waste The cultural context has also been considerably advanced in the areas of both intangible and tangible heritage with increasing attention being given to conservation wildlife management and the notion of protected areas The book investigates the ways in which progress has been made regarding humane trapping and killing of animals and how in contrast the Great Apes initiative and similar work with whales have failed Finally the book addresses the fact that while the notion of ecosystem management has been embraced by a number of environmental regimes it has thus far failed as an international philosophy Geography for the IB Diploma Patterns and Change Paul Guinness,2010-10-21 Covers the four compulsory topics of the Core theme Patterns and Change in the Geography syllabus for the International Baccalaureate IB Diploma Programme back cover **General Technical Report PNW-GTR** ,1992 **Defining Wilderness Quality** Bo Shelby,George H.
