in the relationships between method and result is that core assumptions are more important than sophisticated techniques improved technique does not compensate for faulty assumptions Forecasting is still an art and one that is difficult to master The uses of forecasting can be so varied and applied to so many different disciplines that it's worth making the effort The appraisal of forecasts and the choice of the most likely from a group focusing on the same area is also a type of forecasting

Economic Forecasting for Management Hans G. Graf, 2002-08-30 Before future oriented information can be used as a basis for decision making in economics or business administration it must be understood on a methodological level This book provides decision makers with a thorough understanding of the possibilities offered by various forecasting methods as well as their limitations If managers rely on a forecast with a long term perspective to guide them in making short term decisions planning deficiencies will likely result Likewise if managers use short term forecasts to inform their long term strategic vision failure could easily ensue Graf provides the tools necessary to sidestep the common pitfall of using the wrong forecasting technique for the wrong purpose This is not a detailed examination of the mathematical and statistical tools of empirical economic research Instead forecasting methods are explained so that they can be understood by the managers who employ them in their decision making Graf demonstrates that understanding and in special cases cooperation between forecast developers and users is crucial to creating an effective forecast that results in informed

management decisions He discusses traditional long term macroeconomic and global economic forecasting the scenario technique as a central instrument of long term forecasting and short term economic and market forecasting Prediction or Prophecy? Gregor Betz,2007-10-06 Knowing in order to predict It was this leitmotiv alone that Auguste Comte in the 19th century considered suitable for the then rapidly developing empirical sciences This view remains unchanged until today not only in the empirical sciences themselves but also in the philosophy of science A scientific theory is and should be evaluated primarily on the grounds of its capacity to correctly predict observable phenomena The aim of predicting takes precedence over the other important aim of science namely to produce and purposefully manipulate phenomena by technical means in the laboratory moreover it even includes the latter For if scientists successfully produce and manipulate certain phenomena in an experiment they can ipso facto predict how that experiment will evolve under certain conditions We live in a scientifically dominated world The more science progresses the more important correct scientific predictions become To a sometimes even fatal extent we have made ourselves dependent on science and its results Our scientific technological interventions into nature yet also into social processes cover ever larger spatial and temporal distances and the consequences are ever more drastic given the increasing effort that would be required to reverse the effects if that is possible at all That is the reason why we ought to be very well informed about the consequences of our actions in particular those based on science and technology *Economic Forecasting: The State of the Art* Elia Xacapyr,2016-09-16 An overview of the macroeconomic forecasting industry in the United States that explains and evaluates the forecasting techniques used to make predictions about various aspects of the national economy **Business and Economic Forecasting** Chamber of Commerce of the United States of America. factor models DSGE models restricted vector autoregressions and non linear models as well as models for handling data observed at mixed frequencies high frequency data multiple data vintages methods for forecasting when there are structural breaks and how breaks might be forecast Also covered are areas which are less commonly associated with economic forecasting such as climate change health economics long horizon growth forecasting and political elections Econometric forecasting has important contributions to make in these areas along with how their developments inform the mainstream
