Ecology, Community and Delight Ian Thompson, 2003-09-02 Ecology Community and Delight examines three principal value systems which influence landscape architectural practice the aesthetic the social and the environmental and seeks to discover the role that the profession should follow *The Fact Factory*, 1999 A collection of fun facts about a variety of subjects including animals plants the Earth space and notable people throughout history *Values in Landscape Architecture and Environmental Design* M. Elen Deming, 2015-11-09 The successful realization of diversity resilience usefulness profitability or beauty in landscape design requires a firm understanding of the stakeholders values This collection which incorporates a wide variety of geographic locations and cultural perspectives reinforces the necessity for clear and articulate comprehension of the many factors that guide the design process As the contributors to this collection reveal dominant and emerging social political philosophical and economic concerns perpetually assert themselves in designed landscapes from manifestations of class consciousness in Napa Valley vineyards to recurring themes and conflicts in American commemorative culture as seen in designs for national memorials One essay demonstrates the lasting impact of the doctrine of Manifest Destiny on the culture and spaces of the Midwest while another considers the shifting historical narratives that led to the de domestication and subsequent re wilding of the Oostvaardersplassen in the Netherlands These eleven essays help foster the ability to conduct a balanced analysis of various value systems and produce a lucid visualization of the necessary tradeoffs Offering an array of case studies and theoretical arguments *Values in Landscape Architecture and Environmental Design* encourages professionals and educators to bring self awareness precision and accountability to their consideration of landscape designs

Designing Greenways Paul Cawood Hellmund, Daniel Smith, 2013-03-05 How are greenways designed What situations lead to their genesis and what examples best illustrate their potential for enhancing communities and the environment Designing greenways is a key to protecting landscapes allowing wildlife to move freely and finding appropriate ways to bring people into nature This book brings together examples from ecology conservation biology aquatic ecology and recreation design to illustrate how greenways function and add value to ecosystems and human communities alike Encompassing everything from urban trail corridors to river floodplains to wilderness like linkages greenways preserve or improve the integrity of the landscape not only by stemming the loss of natural features but also by engendering new natural and social functions From 19th century parks and parkways to projects still on the drawing boards Designing Greenways is a fascinating introduction to the possibilities and pitfalls involved in these ambitious projects As towns and cities look to greenways as a new way of reconciling man and nature designers and planners will look to Designing Greenways as an invaluable compendium of best practices

Design Advances in bridging geo information technology and design bring together a wide variety of contributions from authors with backgrounds in urban planning landscape architecture education and geo information technology presenting the latest insights and applications of geo design Geo Design is here understood as a hybridization of the concepts Geo representing the modeling analytical and visualization capacities of GIS and Design representing spatial planning and design turning existing situations into preferred ones Through focusing on interdisciplinary design related concepts and applications of GIS international experts share their recent findings and provide clues for the further development of geo design This is important since there is still much to do Not only in the development of geo information technology but especially in bridging the gap with the design disciplines The uptake on using GIS is still remarkably slow among landscape architects urban designers and planners and when utilized it is often restricted to the basic tasks of mapmaking and data access Knowledge development and dissemination of applications of geodesign through research publications and education therefore remain key factors This publication draws upon the insights shared at the Geodesign Summit Europe held at Delft University of Technology in 2014 All contributions in the book are double blind reviewed by experts in the field
