Just, Sinaia Netanyahu, 2012-12-06 This book demonstrates what the discipline of economics has to offer as support for analyzing cooperation on management of trans boundary water resources It also considers what the discipline of economics has to acquire to become a more effective contributor to trans boundary water resource management given political legal social physical scientific and ecological realities This book has its genesis in a symposium of the International Water and Resource Economics Consortium held at Annapolis Maryland April 13 16 1997 The symposium was organized by the editors and the book contains papers presented at the symposium with subsequent revisions The symposium brought together both economists and agency management personnel for the purpose of discussing not only how economic tools apply to trans boundary water management but also of identifying the obstacles to making such tools useful and informative to politicians and negotiators in public decision making roles

INTERNATIONAL VERSUS DOMESTIC TRANS BOUNDARY PROBLEMS

Trans boundary water problems arise in many dimensions The two most important types of problems emphasized in this book are international and domestic interstate or interregional problems Cooperation on international problems is especially difficult because enforcement must be voluntary given the sovereignty of nations and the absence of an effective legal enforcement mechanism Agreements must be sustainable and self enforced if they are to have lasting benefits Every negotiating country must be convinced it will receive benefits before it gives its consent to cooperation In the absence of enforceable agreements trans boundary i e

Environmental Management in Development Michael E. Colby, 1990 In the past quarter century environmental management has increasingly become a concern of governments More recently the traditional split between developers and conservationists has begun to break down Conceptions of what is economically and technologically practical ecologically necessary and politically feasible are rapidly changing This report discusses the implications of five paradigms of environmental management in development The author notes that the remedial legalistic approach of environmental management is breaking down Instead interest in the more economically integrated approach of resource management has recently taken hold Several interdependent forces indicate that improving the economic management of pollution and resources may be a necessary but insufficient measure to create the conditions for sustainable development The perception

of tradeoffs between development and environmental quality persists in the present debate but its necessity is greatly exaggerated according to this paper Finally it is noted that paradigms may be impervious to evidence and institutions and societies too difficult to change Whether when and how these issues are resolved may be modern civilization s most significant test *Perspectives in International Economic Law* Asif Qureshi,2002-02-12 Economic activity Professor Qureshi insists is a visible manifestation of the human condition The laws that regulate it and develop its norms must be deeply human International economic law must be ever vigilant in its efforts to represent the economic needs of all strata of humanity It must not allow the cultural imperatives of any one group to predominate To investigate the validity of this deeply held conviction in May 2001 Professor Qureshi and the University of Manchester School of Law brought together a conference of major IEL scholars to elicit as broad a diversity of perspectives as possible This book well informed in its insight and far reaching in its implications grew out of that conference Issues and topics that arise in the course of the investigation include globalisation and its institutions the survival of the nation state the role of the International Court of Justice sustainable development developing countries and dispute settlement developing countries and trade negotiations regional integration human rights and the untouchability of IEL and the gender bias of basic IEL institutions and rules There are also clear presentations of specifically Marxist and Islamic perspectives and an analysis along lines of fairness as developed by Thomas Franck and John Rawls *Perspectives in International Economic Law* offers lawyers economists political scientists and policymakers a multifaceted multidisciplinary approach to one of the most vitally important human endeavours of our time While its immediate value and utility is apparent the depth of clear thinking it evinces on every page will keep it current for many years to come *The British National Bibliography* Arthur James Wells,2009 **21st Century**
