Economic Valuation Techniques For The Environment A Case Study Workbook:

Economic Valuation Techniques for the Environment John A. Dixon, Maynard M. Hufschmidt, 1986 Economic Valuation Techniques for the Environment John A. Dixon, Maynard M. Hufschmidt, 1986 The Application of Economic Techniques in Environmental Impact Assessment David E. James, 2013-03-09 The contribution of economic thought and method to environmental management needs practical illustration Too few books on the subject achieve such an outcome This book is among the notable exceptions That economics can provide a powerful vehicle for communicating an integrated understanding of the often diverse scientific findings germane to environmental impact assessment needs to be illustrated convincingly This book does just that But it does more It speaks across cultures not to transfer know how from one culture to another but rather to activate an effective exchange of insights from one locale on the planet to another As such it is a genuine contribution to the great environmental exhortation of our times think globally act locally Too often the people best placed to make such contributions are too committed to practical outcomes and making a living doing so Just occasionally however they can be persuaded to make the special effort required to communicate globally In this book David James has once again orchestrated the contributions of virtuoso performers In doing so he has emulated the contribution he sustained throughout the International Drylands Project and preparation of the books written with John Dixon and Paul Sherman *The Economics of Dry and Management and Case Studies in Dry and Management* Earthscan London Taken together with his recent work as Special Commissioner for the path breaking national Forest and Timber Inquiry for the Australian Government we have a body of work characterised by great worthiness integrity and true global significance **Economic Analysis of the Environmental Impacts of Development Projects** John A. Dixon, Richard A. Carpenter, Louise A. Fallon, Paul B. Sherman, Supachit Manipomoke, 2013-11-05 It has always been thought that some level of pollution and waste is unavoidable in development projects But no one has made much effort to quantify and assess the extent of this sort of damage In this book a group of analysts from the Asian Development Bank and from the East West Center propose a means of constructing useful economic evaluations of the impacts of development projects on the environments in which they are constructed This study demands the systematic evaluation of all the intentional and unintentional consequences of development initiatives before they are determined upon It is essential reading for development economists analysts and bankers Originally published in 1986 *The SAGE Handbook of Environment and Society* Jules Pretty, Andy Ball, Ted Benton, Julia Guivant, David R Lee, David Orr, Max Pfeffer, Professor Hugh Ward, 2007-10-30 A monumental and timely contribution to scholarship on society and environments The handbook makes it easy and compelling for anyone to learn about that scholarship in its full manifestations and as represented by some of the most highly respected researchers and thinkers in the English speaking world It is wide reaching in scope and far reaching in its implications for public and private action a definite must for serious researchers and their libraries Bonnie J McCay Rutgers University This is the desert island

book for anyone interested in the relationship between society and the environment The editors have assembled a masterful collection of contributions on every conceivable dimension of environmental thinking in the social sciences and humanities No library should be without it Robyn Eckersley University of Melbourne The SAGE Handbook of Environment and Society focuses on the interactions between people societies and economies and the state of nature and the environment Editorially integrated but written from multi disciplinary perspectives it is organised in seven sections Environmental thought past and present Valuing the environment Knowledges and knowing Political economy of environmental change Environmental technologies Redesigning natures Institutions and policies for influencing the environment Key themes include locations where the environment society relation is most acute where for example there are few natural resources or where industrialization is unregulated the discussion of these issues at different scales local regional national and global the cost of damage to resources and the relation between principal actors in the environment society nexus Aimed at an international audience of academics research students researchers practitioners and policy makers The SAGE Handbook of Environment and Society presents readers in social science and natural science with a manual of the past present and future of environment society links *Environmental Scenario in India* Sacchidananda Mukherjee, Debashis Chakraborty, 2013-06-17 India has moved along an impressive growth path over the last decade marked with falling share of agriculture stagnating manufacturing expanding services segment growing trade orientation enhanced FDI inflows etc The consequent growth implications are obvious as far as the numbers like GDP growth rate and Per Capita GDP trend are concerned but how sustainable the associated development is with respect to resource management and environmental governance This book captures the economy wide impacts of various activities on environment in India The environmental impacts on water air soil quality and human health are captured through case studies from different parts of India Analyzing separately the concern areas within agriculture cultivation aquaculture manufacturing industrial pollution power generation services waste management bio medical waste e waste recycling and external sector agricultural trade FDI inflow trade in waste products performance of India the book attempts to find an answer to that crucial question The methodology adopted to capture the environmental impacts of various economic activities is derived from the relevant branches like environmental economics agricultural economics and water resources economics The book focusing on particular sectors indicates the concern areas and possible ways for enhancing environmental governance *Rio Salado Environmental Restoration of Two Sites Along the Salt River: (1) Phoenix Reach and (2) Tempe Reach, Feasibility Report, Phoenix and Tempe*, 1998 *Hydrology and the Management of Watersheds* Kenneth N. Brooks, Peter F. Ffolliott, Joseph A. Magner, 2012-10-01 This new edition is a major revision of the popular introductory reference on hydrology and watershed management principles methods and applications The book's content and scope have been improved and condensed with updated chapters on the management of forest woodland rangeland agricultural urban and mixed land use watersheds Case studies and examples throughout the book show

practical ways to use web sites and the Internet to acquire data update methods and models and apply the latest technologies to issues of land and water use and climate variability and change

A Handbook of Approaches to Environmental Policy Analysis in Southern Africa, 2000 Integrated Watershed Management H. M. Gregersen, Peter F.

Ffolliott, Kenneth N. Brooks, 2007 As human populations expand and demands upon natural resources increase the need to manage the environments in which people live becomes more important but also more difficult Land and water management is especially critical as the use of upstream watersheds can drastically affect large numbers of people living in downstream watersheds An integrated approach that stresses both the importance of participatory planning and the institutional and technical constraints and opportunities is therefore necessary The institutional and technical context for managing watersheds and river basins including the involvement of both the public and private sectors is also examined *Economics of Dryland Management* John A. Dixon, David E. James, Paul B. Sherman, 2013-11-05 We have always had land in which the agricultural productivity is limited because there is not enough moisture Systems of farming and burning often degrade dryland further until it is desert Today however the problem is becoming much more serious Over 20 per cent of the world's population lives in dryland areas and unless action is taken drylands will increase dramatically This book focuses on the people who live and farm in the drylands their use of land resources and the economic returns from their decisions In a clear and thorough economic appraisal the authors show how it is still possible to arrest the problem Originally published in 1989

Bibliography of Synthesis Documents on Selected Coastal Ocean Topics Elaine V. Collins, 1994 *Sustainable Forestry Challenges for Developing Countries* Matti Palo, G. Mery, 2012-12-06 This book is an outcome of a research project on Sustainable Forestry and the Environment in Developing Countries The project has been run by Metsantutki muslaitos METLA the Finnish Forest Research Institute since 1987 and will be completed this year A major output by this project has so far been a report in three volumes on Deforestation or development in the Third World The purpose of our multidisciplinary research project is to generate new knowledge about the causes of deforestation its scenarios and consequences More knowledge is needed for more effective efficient and equitable public policy both at the national and international levels in supporting sustainable forestry in developing countries Our project has specifically focused on 90 tropical countries as one group and on three subgroups by continents as well as the three case study countries the Philippines Ethiopia and Chile The University of Joensuu has been our active partner in the Philippine study We have complemented the three cases by the analyses of Brazil and Indonesia the two largest tropical forest owning countries Some other interesting country studies were annexed to complement our book both by geography and expertise The United Nations University World Institute for Development Economics Research UNU-IWIDER in Helsinki Finland has also been partly engaged Most of the results from its project on The Forest in the South and North in Context of Global Warming will however be published later in a separate book *Core List for an Environmental Reference Collection*, 2002 **Environmental**

Impact Assessment Alan Gilpin, 1995 This book examines the crucial role of EIA in government decision making in Europe the Nordic countries North America Asia and the Pacific

Recent Library Additions, 1990 *Handbook of Environmental Economics* Karl-Goran Maler, Jeffrey R. Vincent, 2005-12-09 Much applied environmental economics is concerned with the valuation of changes in environmental quality Obtaining reliable valuation estimates requires attention to theoretical and econometric issues that are often quite subtle Volume 2 of the Handbook of Environmental Economics presents both the theory and the practice of environmental valuation It synthesizes the vast literature that has accumulated since the publication of the Handbook of Natural Resource and Energy Economics two decades ago It includes chapters on individual valuation methods written by researchers responsible for fundamental advances in those methods It also includes cross cutting chapters that deal with aspects of welfare theory uncertainty experimental methods and public health that are pertinent to valuation Throughout the volume attention is paid to research and policy issues that arise not only in high income countries where most of the theory and econometrics that underlie applied valuation methods have been developed but also in poorer parts of the world The volume provides a state of the art reference for scholars and practitioners alike

Ecological Economics Gareth Edwards-Jones, Ben Davies, Salman S. Hussain, 2009-04-01 Ecological economics is an exciting interdisciplinary field of study that combines insights from the natural sciences economics philosophy and other fields to develop innovative approaches to environmental problems It draws on a wide range of analytical perspectives some radical others more conventional to build a more complete understanding of human ecosystem interactions Current research in the field includes work on nature conservation land use planning pollution control natural resource management and environmental impact assessment evaluation Ecological Economics provides a comprehensive introduction to the core themes presented in a clearly structured style with chapters tailored specifically to readers without any economic or philosophical training There is an emphasis throughout on the complementary roles of economics ethics and ecology in environmental decision making processes The book reviews the evolution of important ideas in the field explores the fundamental philosophies underlying different approaches to environmental problems explains in detail the specific tools and techniques used in these approaches and gives numerous examples of how they can be applied Special importance is attached to understanding both the advantages and limitations of different analyses in order to provide a balanced and coherent view of how these different approaches interrelate and how their roles vary in different contexts Written by three authors specializing in ecology economics and philosophy this textbook provides an excellent introduction to the field of ecological economics for students in the natural sciences and other environmental disciplines It will also be of interest to a wide range of professionals and researchers involved in environmental management and policy and others including economists seeking to broaden their knowledge of new methodologies and approaches Further reading suggestions and extensive references are provided for those interested in pursuing particular themes beyond the introductory level The first

introductory ecological economics text written specifically for natural scientists Assumes no prior knowledge of economics or philosophy Emphasises the complementary roles of ecology economics and ethics in environmental decision making processes An emphasis on clarity and accessibility throughout

Handbook of Environmental Economics Karl-Göran Mäler, Jeffrey R. Vincent, 2003 The Handbook of Environmental Economics focuses on the economics of environmental externalities and environmental public goods Volume I examines environmental degradation and policy responses from a microeconomic institutional standpoint Its perspective is dynamic including a consideration of the dynamics of natural systems and global with attention paid to issues in both rich and poor nations In addition to chapters on well established topics such as the theory and practice of pollution regulation it includes chapters on new areas of environmental economics research related to common property management regimes population and poverty mechanism design political economy of regulation experimental evaluations of policy instruments and technological change

The Environment and Emerging Development Issues Partha Dasgupta, Karl-Göran Mäler, 2000 Two and a half billion people are affected directly on a day to day basis by the allocation and use of purely local resources Yet official development economics has concentrated on headline international issues and only recently begun to take account of the dependence of poor countries on their natural resources the link between acute poverty and environmental degradation and the problems associated with the management of local common property such as soil and soil cover water forests and their products animals and fisheries In this volume part of the WIDER Program on the Economics of the Environment expert contributors provide a set of authoritative studies of emerging development issues ranging from foundational matters to case studies original research in areas where there has been a paucity of work to survey papers They address both analytic and empirical issues on the role of environmental resources in the development process presenting explanations of existing situations and policies for the future A wealth of interests and backgrounds is represented and reflected in the cross fertilization between papers
