Jeff Bennett, Russell Blamey

Economics And The Environment A Signalling And Incentives Approach:

Economics and the Environment Ian Wills, 2020-09-13 Coordinating our use of the earth's natural resources is not easy. Resource users are many, their goals diverse, and their impacts on the environment often uncertain. How we use those resources depends on the signals and incentives we receive from either the market or our governments. These systems encourage certain uses of natural resources, but they are not perfect. We harm the environment not out of malice but because we do not know the consequences of our actions or the incentives for harm are too great to ignore. Economics and the Environment argues that by lowering the cost and improving the quality of the necessary signals and incentives, we can better reconcile our diverse interests in the environment. It introduces an economic way of thinking about environmental issues without assuming a background in economics: how the economy and the environment interact, how resource use is coordinated in ideal markets and planned economies, the barriers to ideal signalling and incentives in real markets and real government planning, the economist's tools for dealing with natural resource issues, the uncertainty and complexity of environmental issues, climate change, water rights, air pollution, and overharvesting of common resources. This second edition of Economics and the Environment is fully updated and includes new material on sustainability, valuation of environmental changes, the prospects for international cooperation under the Kyoto Protocol, and the problems of defining and enforcing measures to protect biodiversity. It offers students in both economics and environmental studies programs a coherent framework for understanding our major environmental problems. Ian Wills succeeds in providing a fresh perspective, a very interesting and informative textbook. Economic Record **Economics and the Environment** Ian R. Globalisation and Polarisation Maurice Mullard, 2004-01-01 This book deals with the nature of contemporary globalisation. Maurice Mullard aims to show that globalisation is not an inescapable, unstoppable process, somehow beyond human control, rather that it represents and is being shaped by a series of deliberate policy choices and policy decisions. The emphasis of this fascinating work is on how these policy choices are creating new forms of economic inequalities and also political elites that distort the democratic process. **Cost-Benefit Analysis and Distributional Preferences** Helen Scarborough, Jeff

Bennett, 2012-01-01 Helen Scarborough and Jeff Bennett have produced a work that is genuinely path-breaking. As is often the case with path-breaking work, the idea is simple enough: if people can respond to choice experiments in ways that tell us a lot about what they value and how much they value it, why would they not be able to respond to choice experiments where the options offered have different distributional consequences? Such simple ideas evade implementation not because they are so hard to think up, but because it is so easy to dismiss them as unthinkable. All credit goes to Scarborough and Bennett for busting through this particular unthinkable barrier. The authors may be surprised by the magnitude and the nature of the impact this work eventually enjoys. From the foreword by Alan Randall, The University of Sydney, Australia and The Ohio State

University US This pathbreaking study illustrates and enhances the potential of costbenefit analysis as a tool for decision making Advancing the incorporation of equity preferences in policy analysis the authors demonstrate the application of choice modelling to the estimation of distributional weights suitable for inclusion in a costbenefit analytical framework A platform for discussion of the challenges and opportunities of this approach is presented in the form of a detailed case study designed to estimate community preferences for different intergenerational distributions While the case study is focused on natural resource management and environmental policy the conceptual and methodological advances illustrated by the authors are relevant and applicable to a wider array of policy deliberations This book will prove a challenging and thought provoking read for academics students and policymakers with an interest in environmental issues and or public sector economics

Designing Sustainable Cities Rob Roggema,2020-11-19 This book emphasizes new ways of designing for a sustainable city and urban environment From several angles the future of our urbanism is illuminated From a philosophical point of view the city is seen as an organism following complex ecosystemic principles shining light on indigenous perspectives to become beneficial for sustainable design and core questions are asked whether current architectural practice is really sustainable Simultaneously concrete practices are presented for cities in transformation focusing on green infrastructure smart city principles and health *Valuing Fisheries* Torstein John Arneson Hundloe,2002 Humans have been fishing for food and pleasure since time immemorial Long before the development of powerful commercial fishing vessels tribal communities

sought fish and other marine life for food and ceremonial purposes Today there is a significant tourism sector around diving and snorkelling Commercial and recreational fisheries often compete for the same fish stock Together these two groups compete with those who wish to promote a look but don t take attitude to fish And in some cases traditional indigenous fishers have special demands that can be inconsistent with the needs of other groups The limited nature of fish stocks can lead to arguments between these different groups Too often the arguments are based on a wrong use of economic data Access to and sharing of fisheries resources need not necessarily be based on economic data and principles but if they are the proper approach must be used This book sets out in clear language with simple examples the correct economic method to be used The aim is to improve decision making so that everyone can enjoy a seafood meal drop a line in the water or observe fish in a natural environment without unnecessary conflict

Mass Tourism in a Small World David Harrison,Richard Sharpley,2017-05-26 This new book reviews all aspects of the phenomenon of mass tourism It covers theoretical perspectives including political economy ethics sustainability and environmentalism the historical context and the current challenges to domestic intra regional and international mass tourism As tourism and tourist numbers continue to grow around the world it becomes increasingly important that this subject is studied in depth and best practice applied in real life situations Finishing with a speculative chapter identifying potential future trends and challenges this book forms an essential resource for all researchers and students within tourism studies
