Ecological Stoichiometry Robert W. Sterner, James J. Elser, 2002-11-17 Biochemistry energy flow Ecological Stoichiometry Robert Warner Sterner, James J. Elser, Peter Vitousek, 2002-10-01 All life is chemical That fact underpins the developing field of ecological stoichiometry the study of the balance of chemical elements in ecological interactions This long awaited book brings this field into its own as a unifying force in ecology and evolution Synthesizing a wide range of knowledge Robert Sterner and Jim Elser show how an understanding of the biochemical deployment of elements in organisms from microbes to metazoa provides the key to making sense of both aquatic and terrestrial ecosystems After summarizing the chemistry of elements and their relative abundance in Earth s environment the authors proceed along a line of increasing complexity and scale from molecules to cells individuals populations communities and ecosystems The book examines fundamental chemical constraints on ecological phenomena such as competition herbivory symbiosis energy flow in food webs and organic matter sequestration In accessible prose and with clear mathematical models the authors show how ecological stoichiometry can illuminate diverse fields of study from metabolism to global change Set to be a classic in the field Ecological Stoichiometry is an indispensable resource for researchers instructors and students of ecology evolution physiology and biogeochemistry From the foreword by Peter Vitousek T his book represents a significant milestone in the history of ecology Love it or argue with it and I do both most ecologists will be influenced by the framework developed in this book There are points to question here and many more to test and if we are both lucky and good this questioning and testing will advance our field beyond the level achieved in this book I can t wait to get on with it **Ecological Stoichiometry** Robert Warner Sterner, James J. Elser, 2002 Biochemistry energy flow Philosophies of the Sciences Fritz Allhoff, 2015-12-02 A collection of essays discussing a wide range of sciences and the central philosophical issues associated with them presenting the sciences collectively to encourage a greater understanding of their associative theoretical foundations as well as their relationships to each other Offers a new and unique approach to studying and comparing the philosophies of a variety of scientific disciplines Explores a wide variety of individual sciences including mathematics physics chemistry biology psychology sociology and economics The essays are written by leading scholars in a highly accessible style for the student audience Complements more traditional studies of philosophy of science **Improving soil health** Professor William R. Nutrient Cycling in Forest Ecosystems Robert G. Qualls, 2020-12-03 The long term productivity of forest ecosystems depends on the cycling of nutrients The effect of carbon dioxide fertilization on forest productivity may ultimately be limited by the rate of nutrient cycling Contemporary and future disturbances such as climatic warming N deposition deforestation short rotation silviculture fire both wild and controlled and the invasion of exotic species all place strains on the integrity of ecosystem nutrient cycling Global differences in climate soils and species make it difficult to extrapolate even a single important study worldwide Despite advances in the understanding of nutrient cycling and carbon production in forests many questions remain The chapters in this volume reflect many contemporary research priorities The thirteen studies in this volume are arranged in the following subject groups N and P resorption from foliage worldwide along chronosequences and along elevation gradients Litter production and decomposition N and P stoichiometry as affected by N deposition geographic
