Ecological Theory and Integrated Pest Management Practice Marcos Kogan, 1986-11-28 Perspectives in integrated pest management from an industrial to ecological model of pest management Island biogeographic theory and integrated pest management Population theory and understanding pest outbreaks Trivial movement and foraging Plant defense strategies and host plant resistance Plant defense herbivore and biological control Ecology of insect pathogen and some possible applications Plant plant pathogen insect interactions The Ecology of insecticides and the chemical control of insects Agroecology and economics Agroecosystems structure analysis and modeling Integrated Pest Management Dharam P Abrol, 2013-08-28 Integrated Pest Management Current Concepts and Ecological Perspective presents an overview of alternative measures to traditional pest management practices using biological control and biotechnology The removal of some highly effective broad spectrum chemicals caused by concerns over environmental health and public safety has resulted in the development of alternative reduced risk crop protection products These products less toxic to the environment and easily integrated into biological control systems target specific life stages or pest species Predation recognized as a suitable long term strategy effectively suppresses pests in biotechnological control systems Integrated Pest Management covers these topics and more It explores the current ecological approaches in alternative solutions such as biological control agents parasites and predators pathogenic microorganisms pheromones and natural products as well as ecological approaches for managing invasive pests rats suppression of weeds safety of pollinators role of taxonomy and remote sensing in IPM and future projections of IPM This book is a useful resource to entomologists agronomists horticulturists and environmental scientists Fills a gap in the literature by providing critical analysis of different management strategies that have a bearing on agriculture sustainability and environmental protection Synthesizes research and practice on integrated pest management Emphasizes an overview of management strategies with critical evaluation of each in the larger context of ecologically based pest management *Perspectives in Ecological Theory and Integrated Pest Management* Marcos Kogan, Paul Jepson, 2007-06-28 Since the early days of integrated pest management a sound ecological foundation has been considered essential for the development of effective systems From time to time there have been attempts to evaluate the ways in which ecological theory is exploited in pest control and to review the lessons that ecologists learn from pest management In the last 20 years there have been many developments within the contribution of ecological theory to integrated pest management This book captures some of the themes in both pest management and ecology that have emerged and provides an updated assessment of the role that basic ecology plays in the development of rational and sustainable pest management practices Major themes are examined assessing the significance and potential impact of recent technological and conceptual developments for the future of integrated pest management *Insect Bioecology and Nutrition for Integrated Pest Management* Antônio Ricardo Panizzi, José R. P. Parra, 2012-03-08 The field of insect nutritional ecology has been defined by

how insects deal with nutritional and non nutritional compounds and how these compounds influence their biology in evolutionary time In contrast *Insect Bioecology and Nutrition for Integrated Pest Management* presents these entomological concepts within the framework of integrated pest management IPM It specifically addresses bioecology and insect nutrition in modern agriculture Written for graduate students and professionals in entomology this book covers neotropical information in three sections General Aspects Basic bioecology and insect nutrition artificial diets insect plant interactions insect symbionts the interface of chemical ecology with the food and insect cannibalism Specific Aspects Specific feeding guilds of insects including ants social bees leaf chewers seed suckers seed chewers root feeders gall makers detritivorous feeders pests of storage grains fruit flies aphids endo and ectoparasitoids predators crisopids and hematophagous insects Applied Aspects Host plant resistance and the design of IPM programs in the context of insect bioecology and nutrition Much of the research on which these chapters were written was done in Brazil and based on its neotropical fauna The complexity and diversity of the neotropics provides enough data that readers from all zoogeographical regions can readily translate the information in this book to their specific conditions The book s value as an entry point for further research is enhanced by the inclusion of approximately 4 000 references

McPherson, 1993-05-17 Reflects on insect pests evolution by evaluating existing theories documenting case studies of diverse pest species and presenting new concepts regarding the problem of variation and implications for pest management strategies Leading experts offer contributions which deal with variations in genetic markers and ecologically meaningful traits as well as future perspectives in entomology and

biosystematics      **Handbook of Pest Management** John R. Ruberson, 1999-07-09 Provides a detailed summary of pest management principles and techniques outlining a broad selection of critical issues regarding current practice and future technology in this area Discusses the role of soils weather and surrounding habitats in regulating pest occurrence and severity

**Handbook of Biological Control** T. W. Fisher, Thomas S. Bellows, L. E. Caltagirone, D. L. Dahlsten, Carl B. Huffaker, G. Gordh, 1999-09-20 For many years the use of chemical agents such as pesticides and herbicides has been effective in controlling the many varieties of pests that infest both agricultural crops and backyard gardens However these pests are gradually becoming resistant to these agents because the agents themselves are acting as selective factors making the pests better and better able to resist and persist As a result the use of biological controlling agents is increasing This book is a comprehensive and authoritative handbook of biological control

**Knowledge Generation and Technical Change** Steven Wolf, David Zilberman, 2012-12-06 Knowledge generation and transfer mechanisms are being transformed in important and controversial ways Investment in research and development has increased in response to recognition that scientific productivity is tightly connected to economic dynamism Patent protection has been expanded in order to stimulate higher levels of private investment Intellectual property rights held by public organizations and researchers are now increasingly transferred to private organizations to accelerate the diffusion and enhance the value of knowledge produced by public agencies and universities Additionally new institutions such as university offices of technology transfer venture capital markets and a variety of consortia in knowledge intensive industries are being established throughout the United States and in other parts of the world These changes have led to a repositioning of the state in systems of innovation and an increase in the proprietary character of technical information The purpose of this book is to review and analyze i contemporary transitions in agricultural knowledge generation and extension arrangements from an empirical perspective and ii emerging and contradictory perspectives as to how knowledge systems can be assessed effectively The authors aim to provide the reader with a better understanding of the implications of new biotechnologies and new intellectual property rights regimes on public private relations in science the extent to which benefits from scientific knowledge are being appropriated by private sector actors the diversity and possible outcomes of privatization initiatives in extension and prospects for public goods production and ecological sustainability given contemporary trends The book presents contrasting views on the degree of complementarity and substitution between private and public sector investments in research and extension Recognizing that the labels public and private are incomplete and at times misleading descriptions of the structure and function of coordinating bodies in social systems the analyses highlight ways in which public and private spaces and modes of functioning combine In addition to illustrating a broad range of analytic methodologies useful for studying organizational questions in knowledge systems the authors identify the implications of a range of past and potential institutional innovations

**Insect-Plant Biology** Louis M. Schoonhoven, Joop J. A. van Loon, Marcel Dicke, 2005-12 Half of all insect species are dependent on living plant tissues consuming about 10% of plant annual production in natural habitats and an even greater percentage in agricultural systems despite sophisticated control measures Plants are generally remarkably well protected against insect attack with the result that most insects are highly specialized feeders The mechanisms underlying plant resistance to invading herbivores on the one side and insect food specialization on the other are the main subjects of this book For insects these include food plant selection and the complex sensory processes involved with their implications for learning and nutritional physiology as well as the endocrinological aspects of life cycle synchronization with host plant phenology In the case of plants exposed to insect herbivores they include the activation of defence systems in order to minimize damage as well as the emission of chemical signals that may attract natural enemies of the invading herbivores and may be exploited by neighbouring plants that mount defences as well Insect Plant Biology discusses the operation of these mechanisms at the molecular and organismal levels in the context of both ecological interactions and evolutionary relationships In doing so it uncovers the highly intricate antagonistic and mutualistic interactions that have evolved between plants and insects The book concludes with a chapter on the application of our knowledge of insect plant interactions to agricultural production This multidisciplinary approach will appeal to students in agricultural entomology plant sciences ecology and indeed anyone interested in the principles underlying the relationships between the two largest groups of organisms on earth plants and insects BOOK JACKET Title Summary field provided by Blackwell North America Inc All Rights Reserved
