**Ecology & Evolution in the Tropics** Maureen A. Donnelly, Brian I. Crother, Craig Guyer, Marvalee H. Wake, Mary E. White, 2005 In these essays that survey the burgeoning field of tropical herpetology former students and associates pay tribute to Jay Savage's four decades of mentoring The result is a book unlike any other available in tropical herpetology Covering a wide array of subjects Ecology and Evolution in the Tropics is the first book in more than two decades to broadly review research on tropical amphibians and reptiles A tribute to Savage and an invaluable addition to the herpetological literature this work will be cited for years to come The Ecology and Behavior of Amphibians Kentwood D. Wells, 2010-02-15 Consisting of more than six thousand species amphibians are more diverse than mammals and are found on every continent save Antarctica Despite the abundance and diversity of these animals many aspects of the biology of amphibians remain unstudied or misunderstood The Ecology and Behavior of Amphibians aims to fill this gap in the literature on this remarkable taxon It is a celebration of the diversity of amphibian life and the ecological and behavioral adaptations that have made it a successful component of terrestrial and aquatic ecosystems Synthesizing seventy years of research on amphibian biology Kentwood D Wells addresses all major areas of inquiry including phylogeny classification and morphology aspects of physiological ecology such as water and temperature relations respiration metabolism and energetics movements and orientation communication and social behavior reproduction and parental care ecology and behavior of amphibian larvae and ecological aspects of metamorphosis ecological impact of predation on amphibian populations and antipredator defenses and aspects of amphibian community ecology With an eye towards modern concerns The Ecology and Behavior of Amphibians concludes with a chapter devoted to amphibian conservation An unprecedented scholarly contribution to amphibian biology this book is eagerly anticipated among specialists *Biodiversity of Pantepui* Valentí Rull, Teresa Vegas-Vilarrúbia, Otto Huber, Celsa Señaris, 2019-06-12 Biodiversity of Pantepui The Pristine Lost World of the Neotropical Guiana Highlands provides the most updated and comprehensive knowledge on the biota origin and evolution of the Pantepui biogeographical province It synthesizes historical information and recent discoveries covering the main biogeographic patterns evolutionary trends and conservational efforts Written by international experts on the biodiversity of this pristine land this book explores what makes Pantepui a unique natural laboratory to study the origin and evolution of Neotropical biodiversity under the influence of only natural drivers It discusses the organisms living in Pantepui including algae plants several groups of invertebrates birds amphibians reptiles and mammals The latter portion of the book delves into the effects of human activity and global warming on Pantepui and current conservational efforts to combat these threats Biodiversity of Pantepui is an important resource for researchers in ecology biogeography evolution and conservation who want to understand the biodiversity and natural history of this region and how to help conserve and protect the Guiana Highlands from environmental and human damages Offers a climactic and ecological history of the region since the Late Glacial epoch

**The Essential Naturalist** Michael H. Graham, Joan Parker, Paul K. Dayton, 2011-05-15 Like nearly every area of scholarly inquiry today the biological sciences are broken into increasingly narrow fields and subfields its practitioners divided into ecologists evolutionary biologists taxonomists paleontologists and much more But all these splintered pieces have their origins in the larger field of natural history and in this era where climate change and relentless population growth are irrevocably altering the world around us perhaps it s time to step back and take a new fresh look at the larger picture The Essential Naturalist offers exactly that a wide ranging eclectic collection of writings from more than eight centuries of observations of the natural world from Leeuwenhoek to E O Wilson from von Humboldt to Rachel Carson Featuring commentaries by practicing scientists that offer personal accounts of the importance of the long tradition of natural history writing to their current research the volume serves simultaneously as an overview of the field s long history and as an inspirational starting point for new explorations for trained scientists and amateur enthusiasts alike

**Relict Species** Jan Christian Habel, Thorsten Assmann, 2009-12-03 Mankind has evolved both genetically and culturally to become a most successful and dominant species But we are now so numerous and our technology is so powerful that we are having major effects on the planet its environment and the biosphere For some years prophets have warned of the possible detrimental consequences of our activities such as pollution deforestation and overfishing and recently it has become clear that we are even changing the atmosphere e.g. ozone carbon dioxide This is worrying since the planet's life systems are involved and dependent on its functioning Current climate change global warming is one recognised consequence of this larger problem To face this major challenge we will need the

research and advice of many disciplines Physics Chemistry Earth Sciences Biology and Sociology and particularly the commitment of wise politicians such as US Senator Al Gore An important aspect of this global problem that has been researched for several decades is the loss of species and the impoverishment of our ecosystems and hence their ability to sustain themselves and more particularly us Through evolutionary time new species have been generated and some have gone extinct Such extinction and regeneration are moulded by changes in the earth's crust atmosphere and resultant climate Some extinctions have been massive particularly those associated with catastrophic meteoric impacts like the end of the Cretaceous Period 65Mya

**Amphibian conservation action plan : proceedings IUCN/SSC Amphibian Conservation Summit 2005**, 2007 **Avoiding Attack** Graeme D. Ruxton, William L. Allen, Thomas N. Sherratt, Michael P.

Speed, 2019-01-31 Avoiding Attack discusses the diversity of mechanisms by which prey avoid predator attacks and explores how such defensive mechanisms have evolved through natural selection It considers how potential prey avoid detection how they make themselves unprofitable to attack how they communicate this status and how other species have exploited these signals Using carefully selected examples of camouflage mimicry and warning signals drawn from a wide range of species and ecosystems the authors summarise the latest research into these fascinating adaptations developing mathematical models where appropriate and making recommendations for future study This second edition has been extensively rewritten particularly in the application of modern genetic research techniques which have transformed our recent understanding of adaptations in evolutionary genomics and phylogenetics The book also employs a more integrated and systematic approach ensuring that each chapter has a broader focus on the evolutionary and ecological consequences of anti predator adaptation The field has grown and developed considerably over the last decade with an explosion of new research literature making this new edition timely

**Parsimony, Phylogeny, and Genomics** Victor A. Albert, 2005-03-24 Table of contents **Museums** John E. Simmons, 2016-07-07 This comprehensive history of museums begins with the origins of collecting in prehistory and traces the evolution of museums from grave goods to treasure troves from the Alexandrian Temple of the Muses to the Renaissance cabinets of curiosities and onto the diverse array of modern institutions worldwide The development of

museums as public institutions is explored in the context of world history with a special emphasis on the significance of objects and collecting. The book examines how the successful exportation of the European museum model and its international adaptations have created public institutions that are critical tools in diverse societies for understanding the world. Rather than focusing on a specialized aspect of museum history, this volume provides a comprehensive synthesis of museums worldwide from their earliest origins to the present. *Museums: A History* tells the fascinating story of how museums respond to the needs of the cultures that create them. Readers will come away with an understanding of the comprehensive history of museums from prehistoric collections to the present: the evolution of museums presented in the context of world history; the development of museums considered in diverse cultural contexts; a global perspective on museums; the object-centered history of museums; museums as memory institutions. A constant theme throughout the book is that museums have evolved to become institutions in which objects and learning are associated to help human beings understand the world around them. Illustrations amplify the discussions.
