Changing World Donald R. Kelley, 2021-01-14 The world is becoming more complex fraught with increasing possibilities for conflict over national rivalries economic competition and cultural and ideological fault lines This clear eyed text offers a structured and theoretically grounded way to think about the forces that animate change and the alternative futures they may create Donald Kelley views both contemporary reality and the future we face through the perspective of four different paradigms that shape our way of thinking about the world The nation state paradigm built on the assumption that the traditional Westphalian nation state remains the key building block of the present and the future which leads us to predict the future in terms of the nature and alignment of nation states The economic paradigm built on the assumption that

economic factors are increasingly important which leads us to see the future in terms of factors such as interdependence globalization and trade as well as the growing opposition to these developments and the prioritization of national economic needs The identity and culture paradigm built on the distinct identities and cultures of nations and regions which leads us to view the future in terms of conflicting culture based communities transcending formal national or economic interests The ideology paradigm based on a post cold war reemergence of ideological conflict within and among nations which leads us to view a world based on ideology based conflict From these paradigms and their interactions Kelley builds a series of possible alternative futures of the international system His framework provides a unique way of looking at how and why the world is changing and the many different futures some peaceful and productive some warlike and destructive and others simply dysfunctional in which we might live

Russian Energy in a Changing World Jakub M. Godzimirski, 2016-03-23 For a long time Russia's position as a key global energy player has enhanced Moscow's international economic and political influence whilst causing concern amongst other states fearful of becoming too dependent on Russia as an energy supplier The Global Financial Crisis shook this established image of Russia as an indispensable energy superpower immune to negative external influences and revealed the full extent of Russia's dependence on oil and gas for economic and political influence This led to calls from within the country for a new approach where energy resources were no longer regarded wholly as an asset but also a potential curse resulting in an over reliance on one sector thwarting modernization of the economy and the country as a whole In this fascinating and timely volume leading Russian and Western scholars examine various aspects of Russian energy policy and the opportunities and constraints that influence the choices made by the country's energy decision makers Contributors focus on Russia's energy relations with the rest of the world alongside internal debates about the need for diversification and modernisation in a changing economy country and world system where overdependence on energy commodities has become a key concern for customer and supplier alike
