Clark, Lance Taylor, 1975 The status of planning an overview Models and policy the dialogue between model builder and planner Theoretical foundations and technical implications Quantitative foundations and implications of planning processes Intersectoral consistency and macroeconomic planning The foreign trade sector in planning models Employment and human capital formation Planning models shadow prices and project evaluation Planning for multiple goals Interindustry planning models for a multiregional economy Planning with economies of scale Substitution and nonlinearities in planning models **Taylor Economy-wide Models and Development Planning** Charles R. Srinivasan, 1983 **Development Policy and Planning** Anis Chowdhury, Colin Kirkpatrick, 2003-09-02 Reorientation from economic controls to a market based approach led to significant changes in the economic policy of developing countries in the 1980s Yet with governments continuing to exercise economic management to accelerate growth beyond that achieved by market forces techniques and models of development planning are still an integral feature of development policy management Development Policy and Planning provides a non technical explanation of the main techniques and models used for economic policy formulation Each technique is illustrated in application through practical examples **Development Strategy and Management of the Market Economy** Edmond Malinvaud, 1997 These companion volumes examine the highly topical issue of the adequacy of markets as an instrument of economic and social development In this era of transition and experimentation in economic management by governments a group of prominent international economists was brought together to distill their thinking on the changing role of government in the development process The first volume discusses the broad questions the second volume breaks down the analysis into more detailed topics **Aspects of Development and Underdevelopment** Joan Robinson, 1979-09-06 An analysis of the economic mechanisms that produce wealth in the midst of growing misery **Planning with the semi-input-output method** A. Kuyvenhoven, 2012-12-06 The semi input output method was introduced by Professor Jan Tinbergen in the early 1960 s in fairly obscure places in the economic literature The basic idea of the method is a very simple one and does not require lengthy and sophisticated exposition to be understood This fact together perhaps with Tinbergen s dislike for very formalized and technical analysis probably explains why he himself has never given a full exposition and elaboration of this method Nevertheless the concept did not remain unnoticed and authors such as B Hansen and some of Tinbergen s collaborators in particular P A Cornelisse and J Versluis have contributed to the elaboration of the method The present work by Dr A Kuyvenhoven also a long time collaborator of Tinbergen has provided us with the first full and in my opinion definite exposition of the nature technique and use of the semi input output method now more than 15 years after the
