Influence of Radiation on Material Properties F. A. Garner, 1987 Comprehensive Nuclear Materials, 2020-07-22

Materials in a nuclear environment are exposed to extreme conditions of radiation temperature and or corrosion and in many cases the combination of these makes the material behavior very different from conventional materials This is evident for the four major technological challenges the nuclear technology domain is facing currently i long term operation of existing Generation II nuclear power plants ii the design of the next generation reactors Generation IV iii the construction of the ITER fusion reactor in Cadarache France iv and the intermediate and final disposal of nuclear waste In order to address these challenges engineers and designers need to know the properties of a wide variety of materials under these conditions and to understand the underlying processes affecting changes in their behavior in order to assess their performance and to determine the limits of operation Comprehensive Nuclear Materials Second Edition Seven Volume Set provides broad ranging validated summaries of all the major topics in the field of nuclear material research for fission as well as fusion reactor systems Attention is given to the fundamental scientific aspects of nuclear materials fuel and structural materials for fission reactors waste materials and materials for fusion reactors The articles are written at a level that allows undergraduate students to understand the material while providing active researchers with a ready reference resource of information Most of the chapters from the first Edition have been revised and updated and a significant number of new topics are covered in completely new material During the ten years between the two editions the challenge for applications of nuclear materials has been significantly impacted by world events public awareness and technological innovation Materials play a key role as enablers of new technologies and we trust that this new edition of Comprehensive Nuclear Materials has captured the key recent developments Critically reviews the major classes and functions of materials supporting the selection assessment validation and engineering of materials in extreme nuclear environments Comprehensive resource for up to date and authoritative information which is not always available elsewhere even in journals Provides an in depth treatment of materials modeling and simulation with a specific focus on nuclear issues Serves as an excellent entry point for students and researchers new to the field *Structural Materials for Generation IV Nuclear Reactors* Pascal Yvon, 2016-08-27 Operating at a high level of fuel efficiency safety proliferation resistance sustainability and cost generation IV nuclear reactors promise enhanced features to an energy resource which is already seen as an outstanding source of reliable base load power The performance and reliability of materials when subjected to the higher neutron doses and extremely corrosive higher temperature environments that will be found in generation IV nuclear reactors are essential areas of study as key considerations for the successful development of generation IV reactors are suitable structural materials for both in core and out of core applications Structural Materials for Generation IV Nuclear Reactors explores the current state of the art in these areas Part One reviews the materials requirements and challenges in generation IV systems Part Two presents the core

materials with chapters on irradiation resistant austenitic steels ODS FM steels and refractory metals amongst others Part Three looks at out of core materials Structural Materials for Generation IV Nuclear Reactors is an essential reference text for professional scientists engineers and postgraduate researchers involved in the development of generation IV nuclear reactors Introduces the higher neutron doses and extremely corrosive higher temperature environments that will be found in generation IV nuclear reactors and implications for structural materials Contains chapters on the key core and out of core materials from steels to advanced micro laminates Written by an expert in that particular area
