 USA *Trade and Industrial Development in Africa* Theresa Moyo, 2014-12-29 This book revisits the perennial challenge
 that scholars economists and politicians have been grappling with since the 1960s Development in this book has been defined
 in a context that projects it as a multidimensional and complex process which seeks to enhance the human social economic
 and cultural welfare of the people This book calls for a rethinking of trade and industry for Africas development It uses data
 drawn from national development plans and strategies and trade and industry issues have been prioritized at the continental
 level in key policy documents On the whole Africas industry and trade performance have been poor in spite of national
 regional and continental plans The contributors to this volume propose some alternative strategies and policies which are
 necessary for trade and industry to grow and to contribute to the wellbeing of Africas people It calls for a developmental
 trade and industry policy which fundamentally must be people centred African states should invest time energy and
 resources to develop policies which will take into consideration African realities The different contributors are aware that
 Africa has experienced strong economic growth in the recent past but this growth has largely been due to a strong demand
 for Africas primary commodity exports It has also been a result of increases in productivity and domestic investment and
 remittances from Africans living in the Diaspora It is important to note that despite this unprecedented growth performance
 the impact of trade and industry on development has been limited The book argues that a structural transformation of Africas
 economies is inevitable if Africa is to achieve the shift from the dominant paradigm of production and export of primary
 goods The various contributors to this book agree that there is need to rethink policy and strategy in order to achieve
 industrial development in Africa There is no unique solution or answer that can fit all situations as African countries are not
 the same While Africa can draw lessons from other regions which have successfully industrialized this book argues that
 policies and strategies will have to be adapted to country specific situations and circumstances *Service-Oriented*

Positioning Higher Education Institutions Rosalind M. O. Pritchard, Attila Pausits, James Williams, 2016-09-26 Higher education is of growing public and political importance for society and the economy Globalisation is transforming it from a local and national concern into one of international significance In order to fulfil societal governmental and business sector needs many universities are aiming to re position themselves The book initially considers their compass They aspire to transformational planning mission and strategy in which social justice is important people are not treated as mere means to an end and traditional moral positions are respected This transformational urge is sometimes vitiated by blunt demands of new public management that overlook universities potential for serving the public good The volume then addresses universities success in meeting their targets Often the challenge in evaluation is the need to reconcile tensions for example between structure and pastoral care of students institutional competition and collaboration roles of academics and administrators performance based funding versus increased differentiation Measurement is supposed to provide discipline align institutional and state policy and provide a vital impetus for change Yet many of these measurement instruments are not fully fit for purpose They do not take sufficient account of institutional missions either of old or of specialist universities and sophisticated measurement of the student experience requires massive resources Change and positioning have become increasingly key elements of a complex but heterogeneous sector requiring new services and upgraded instruments
