Dan Zhang,Xuechao Duan,2021-04-07 Sensors are the eyes or and ears of an intelligent system such as UAV AGV and robots With the development of material signal processing and multidisciplinary interactions more and more smart sensors are proposed and fabricated under increasing demands for homes the industry and military fields Networks of sensors will be able to enhance the ability to obtain huge amounts of information big data and improve precision which also mirrors the developmental tendency of modern sensors Moreover artificial intelligence is a novel impetus for sensors and networks which gets sensors to learn and think and feed more efficient results back This book includes new research results from academia and industry on the subject of Smart Sensors and Networks especially sensing technologies utilizing Artificial Intelligence The topics include smart sensors biosensors sensor network sensor data fusion artificial intelligence deep learning mechatronics devices for sensors applications of sensors for robotics and mechatronics devices **High Frequency Over-the-Horizon Radar** Giuseppe Aureliano Fabrizio,2013-07-09 THE MOST COMPLETE GUIDE TO HIGH FREQUENCY OVER THE HORIZON RADAR Written by a leading global expert on the topic High Frequency Over the Horizon Radar provides in depth coverage of the signal processing models and techniques that have significantly advanced OTH radar technology This pioneering work describes the fundamental principles of OTH radar design and operation and then delves into the mathematical modeling of HF signals received by actual OTH radar systems based on experimental data analysis Numerous examples illustrate the practical application of modern adaptive signal processing techniques to real and simulated OTH radar data This authoritative text covers skywave and surface wave systems and is an invaluable resource for researchers engineers and practitioners working with OTH radar systems and technologies **Low Power UWB CMOS Radar Sensors** Hervé Paulino,Joao Goes,Adolfo Steiger Garção,2008-04-30 Low Power UWB CMOS Radar Sensors deals with the problem of designing low cost CMOS radar sensors The radar sensor uses UWB signals in order to obtain a reasonable target separation capability while maintaining a maximum signal frequency below 2 GHz This maximum frequency value is well within the reach of current CMOS technologies The use of UWB signals means that most of the methodologies used in the design of circuits and systems that process narrow band signals can no longer be applied Low Power UWB CMOS Radar Sensors provides an analysis between the interaction of UWB signals the antennas and the processing circuits This analysis leads to some interesting conclusions on the types of antennas and types of circuits that

should be used A methodology to compare the noise performance of UWB processing circuits is also derived This methodology is used to analyze and design the constituting circuits of the radar transceiver In order to validate the design methodology a CMOS prototype is designed and experimentally evaluated *Generalized Low-Voltage Circuit Techniques for Very High-Speed Time-Interleaved Analog-to-Digital Converters* Sai-Weng Sin,Seng-Pan U,Rui Paulo Martins,2010-09-29

Analog to Digital Converters ADCs play an important role in most modern signal processing and wireless communication systems where extensive signal manipulation is necessary to be performed by complicated digital signal processing DSP circuitry This trend also creates the possibility of fabricating all functional blocks of a system in a single chip System On Chip SoC with great reductions in cost chip area and power consumption However this tendency places an increasing challenge in terms of speed resolution power consumption and noise performance in the design of the front end ADC which is usually the bottleneck of the whole system especially under the unavoidable low supply voltage imposed by technology scaling as well as the requirement of battery operated portable devices Generalized Low Voltage Circuit Techniques for Very High Speed Time Interleaved Analog to Digital Converters will present new techniques tailored for low voltage and high speed Switched Capacitor SC ADC with various design specific considerations
