Edison Thomas A. Edison, 1989 Winner of the Association of American Publishers's Excellence in Professional and Scholarly Publishing Architecture and Urban Planning Award

The Making of an Inventor volume 1 of the monumental *The Papers of Thomas A. Edison* takes us through Edison's life from early childhood to age twenty six when his work in telegraphy laid the groundwork for some of his best known inventions. An 1868 telegraph design by the twenty one year old Edison for instance reveals the now familiar drum and stylus that reappeared in the phonograph of 1877 and in his earliest motion picture design. *The Making of an Inventor* contains 90 percent of all known documents relating to Edison's boyhood and early career including every entry from his Newark lab notebooks. Illustrated with nearly 600 of the inventor's own drawings and sketches it provides a comprehensive account of the origins of Edison's creative genius. Praise for previous volumes of *The Papers of Thomas A. Edison*: Those interested in America's technological culture can eagerly look forward to the appearance of each volume of the *Edison Papers: Technology and Culture*. The essence of the volume is Edison's technical notebooks a window onto the inventor's workshop. His lucidity comes through everywhere. His writing and drawing come together as a single vigorous thought process. Russell McCormack *New York Times* A mine of material. Scrupulously edited. No one could ask for more. A choplicking feast for Edison biographers well into the next century and perhaps beyond. Fred Howard *Washington Post* A triumph of the bookmaker's art with splendidly arranged illustrations essential background information and cautionary reminders of the common sources on which Edison's imagination drew. David Joravsky *New York Review of Books* In the pages of this volume Edison the man his work and his times come alive. A delight to browse through or to read carefully. Thomas J. Misa *Science*

Edison's Electric Light Robert Friedel, Paul B. Israel, 2010-07-19 In September 1878 Thomas Alva Edison brashly and prematurely proclaimed his breakthrough invention of a workable electric light. That announcement was followed by many months of intense experimentation that led to the successful completion of his Pearl Street station four years later. Edison was not alone nor was he first in developing an incandescent light bulb but his was the most successful of all competing inventions. Drawing from the documents in the Edison archives Robert Friedel and Paul Israel explain how this came to be. They explore the process of invention through the Menlo Park notes discussing the full range of experiments including the testing of a host of materials the development of such crucial tools as the world's best vacuum pump and the construction of the first large scale electrical generators and power distribution systems. The result is a fascinating story of excitement risk and competition. Revised and updated from the original 1986 edition this definitive study of the most famous invention of America's most famous inventor is completely keyed to the printed and electronic versions of the *Edison Papers* inviting the reader to explore further the remarkable original sources.
