Emotional Memory Across the Adult Lifespan Elizabeth A. Kensinger, 2008-12-15 Though many factors can influence the

likelihood that we remember a past experience one critical determinant is whether the experience caused us to have an emotional response Emotional experiences are more likely to be remembered than nonemotional ones and over the past couple of decades there has been an increased interest in understanding how emotion conveys this memory benefit This book begins with a broad overview of emotion memory and the neural underpinnings of each providing the reader with an appreciation of the complex interplay between emotion and memory It then examines how emotion influences young adults abilities to store information temporarily or over the long term It explains emotion s influence on the memory processes that young adults use consciously and on the processes that guide young adults preferences and actions without their awareness This book then moves on to describe how each of these influences of emotion are affected by the aging process and by age related disease providing the reader with a lifespan perspective of emotional memory Within each of the domains covered the book integrates research from cognitive psychology cognitive neuroscience and neuropsychological perspectives examining both the behavioral and thought processes that lead to emotion s effects on memory and also the underlying brain processes that guide those influences of emotion This book will be of interest to researchers and graduate students in memory emotion and aging working in the fields of cognitive psychology cognitive or affective neuroscience and developmental or lifespan psychology

Hemispheric Bases for Emotion and Memory Tad T. Brunye, Sarah R. Cavanagh, Ruth E. Propper, 2015-06-01 It has become clear that the two halves of the cortex differ in their contributions to both affective and memory processes Still the exact nature of the interrelationships among hemispheric function emotion and memory remains elusive For example controversy remains regarding differential hemispheric involvement in emotion motivation and affective style Regarding memory although evidence suggests differences in the manner in which the hemispheres interact may be related to memory retrieval it is still not certain which factors involved in retrieval encourage or inhibit hemispheric communication The goal of this Research Topic was to bring together diverse scientific perspectives on lateralized brain mechanisms underlying emotion motivation and memory A range of international experts with diverse backgrounds theoretical perspectives and experimental methods contributed to the Topic These contributions inform our understanding of lateralized affective and cognitive processes by providing thorough reviews of our current state of knowledge based on previous literature by sharing intriguing new empirical findings and by proposing theoretical models with testable frameworks to stimulate future research
