Larusson, Brandon White, 2014-07-04 In education today technology alone doesn't always lead to immediate success for students or institutions. In order to gauge the efficacy of educational technology, we need ways to measure the efficacy of educational practices in their own right. Through a better understanding of how learning takes place, we may work toward establishing best practices for students, educators, and institutions. These goals can be accomplished with learning analytics. *Learning Analytics: From Research to Practice* updates this emerging field with the latest in theories, findings, strategies, and tools from across education and technological disciplines. Guiding readers through preparation, design, and examples of implementation, this pioneering reference clarifies LA methods as not mere data collection but sophisticated systems based analysis with practical applicability inside the classroom and in the larger world. Case studies illustrate applications of LA throughout academic settings, e.g., intervention, advisement, technology design, and their resulting impact on pedagogy and learning. The goal is to bring greater efficiency and deeper engagement to individual students, learning communities, and educators, as chapters show diverse uses of learning analytics to enhance student and faculty performance, improve student understanding of course material, assess and attend to the needs of struggling learners, improve accuracy in grading, allow instructors to assess and develop their own strengths, encourage more efficient use of resources at the institutional level. Researchers and practitioners in educational technology, IT, and the learning sciences will hail the information in *Learning Analytics: From Research to Practice* as a springboard to new levels of student, instructor, and institutional success.

**Intervention Research in Educational Practice** Hermann Astleitner, 2020 Improving learning and teaching at schools or universities may start with choosing evidence-based interventions and practices but does not end there. To ensure sustainable changes to programs in educational practice, interventions need to address complex issues related to theories, research designs, and measurements. This book presents typical but often overlooked problems in intervention research in educational practice. These problems are embedded in various educational areas such as, amongst others, school effectiveness, instructional design, or motivational aspects of teacher trainings.
