Chandler Jr.,James W. Cortada,2000-08-10 This book makes the startling case that North Americans were getting on the information highway as early as the 1700 s and have been using it as a critical building block of their social economic and political world ever since By the time of the founding of the United States there was a postal system and roads for the distribution of mail copyright laws to protect intellectual property and newspapers books and broadsides to bring information to a populace that was building a nation on the basis of an informed electorate In the 19th century Americans developed the telegraph telephone and motion pictures inventions that further expanded the reach of information In the 20th century they added television computers and the Internet ultimately connecting themselves to a whole world of information From the beginning North Americans were willing to invest in the infrastructure to make such connectivity possible This book explores what the deployment of these technologies says about American society The editors assembled a group of contributors who are experts in their particular fields and worked with them to create a book that is fully integrated and cross referenced Taking Off Jonathan Coopersmith,Roger D. Launius,2003 2003 marks the centennial of manned flight a major anniversary for an Earth shattering accomplishment The papers contained in this volume were presented at the 2003 American Association for the Advancement of Science Annual Meeting **The Oxford Handbook of Contextual Political Analysis** Robert E.
