This book constitutes a collection of articles that were written for and recently published as special sections in three consecutive issues of the Journal of Personality Assessment. Part I provides lucid commentaries on the current status of and future issues regarding the Rorschach and MMPI 2 and other instruments including the Minnesota Multiphasic Personality Inventory Adolescent MMPI A the Interpersonal Adjective Scales IAS R the Inventory of Interpersonal Problems Circumplex version IIP C the revised NEO Personality Inventory NEO PI R and the third edition of the Millon Clinical Multiaxial Inventory MCMI III. The authors not only participated in the development of the instruments but continue to lead the research effort in their application in both clinical and research settings. Part II addresses several issues that have been recurring themes and often topics of debate in the research and professional literature. The contributors discuss the impact of the five factor model on personality assessment the issue of deception in personality assessment and various critical issues in the measurement of mood states. Other articles focus on the integration of the MMPI 2 and Rorschach and the process that clinicians should follow when applying scientific knowledge to clinical practice. Part III is primarily devoted to overviews of several statistical methods that are employed infrequently in personality assessment research but have great potential in contributing to the understanding of the complex data sets often encountered in the measurement and study of personality. These articles serve as both an introduction and a brief tutorial for personality researchers who are unfamiliar with the subject matter. They are valuable references that will form the basis for evaluating the appropriate use of these methods in published research in their areas of interest. Handbook of Cross-Cultural and Multicultural Personality Assessment Richard H. Dana, 2000-02. Throughout the world as in the United States psychologists are increasingly being called upon to evaluate clients whose backgrounds differ from their own. It has long been recognized that standard personality and psychopathology assessment instruments carry cultural biases and in recent years efforts to correct these biases have accelerated. The Handbook of Cross Cultural and Multicultural Personality Assessment brings together researchers and practitioners from 12 countries with diverse ethnic and racial identities and training to present state of the art knowledge about how best to minimize cultural biases in the assessment of personality and psychopathology. They consider research methodology the design and construction of standard objective and projective tests the use of measures of acculturation racial identity and culture specific tests the social etiquette of service delivery and the interpretation of test data for clinical diagnosis. Ranging widely through all the relevant issues they share a common collective vision of how culturally competent services should be delivered to clients. The Handbook offers the first

comprehensive view of a consistent approach to cultural competence in assessment a necessary precursor of effective intervention It will become an indispensable reference for all those whose practice or research involves individuals with different ethnic and racial identities

*Multicultural Assessment* Richard H. Dana, 2005-03-23 Psychologists throughout the world are being asked to assess an increasingly diverse clientele immigrants refugees second and third generations still influenced by different cultures and languages and indigenous peoples now moving towards the mainstream Most are ill equipped by training and experience to understand assess and subsequently treat such clients competently and ethically Virtually all agree on the need for culture sensitive assessment but it has proven difficult to provide adequate services despite good intentions and funding Too often clients who may have different worldview and health illness beliefs are marginalized For many reasons standard assessment instruments designed researched and normed on a few groups in the United States the MMPI 2 the Rorschach and the TAT are used as though they were universally applicable Most busy practitioners have little time to investigate alternatives developed for use with one new group or another focused on one issue or another generally in a research context In this book Richard Dana proposes a new model of multicultural assessment practice and points directions for future training and research He presents general culture specific and step by step instrument specific guidelines for the use of the standard armamentarium with different groups Throughout he highlights exciting new interpretive possibilities the traditional tests offer that should be regularly exploited but emphasizes the importance of recognizing psychometric limits Four extended examples of the use of one or several instruments with a specific group offer concrete illustrations of the model in action *Multicultural Assessment Principles Applications and Examples* constitutes an invaluable new resource for psychologists and for their students and trainees

**Emotional and Interpersonal Dimensions of Health Services** McGill Initiative for the Integrative Management of Health, Institut universitaire de gériatrie de Montréal, 2003 While technological and biomedical breakthroughs have provided a remarkable array of tests equipment drugs and procedures for diagnosing and treating acute diseases modern medicine and professional health practices have not taken the same strides in the more human aspects of care *Emotional and Interpersonal Dimensions of Health Services* considers ways modern health care practices could benefit from paying more attention to the science of care Contributors examine the degree to which the provision of health care is influenced by characteristics of the health service organization such as the administrative structure and the human resources available They demonstrate that job satisfaction and conditions play an important role in shaping the quality and effectiveness of care and discuss the emotional support health care providers need to avoid long term exhaustion and ensure well being The contributors identify qualities of the client provider interaction that lead to positive health care outcomes such as providing information responding to patient concerns facilitating interactions with the health care system and encouraging participation in personal health care and offer examples of innovative conceptual and analytical approaches to better health care practices Contributors include Heather
