Buckley,2011-04-25 Debt for development exchanges are an important financing tool for development They make debt relief more politically and practically attractive to donor countries and serve the development of recipient countries through the cancellation of external debt and the funding of important development projects This book commences by chronicling the emergence of debt for development exchanges from their forebears debt equity exchanges and analyzes why debt for development suffers from very few of the problems that plagued debt equity The book analyzes the different types of debt for development exchanges and the different ways they have been used by all donor nations that have made use of them The book then explores a range of critical perspectives on exchanges and concludes by considering a wide range of new and innovative uses for the funds generated by exchanges **Reinsurance Regulation:A Contemporary and Comparative Study** Wallace

Wang,2003-01-01 We seem to be living at a time when insurance is strained to the breaking point From hurricanes and earthquakes to terrorist attacks and threats of nuclear devastation enormous risks to life and property and accompanying liabilities proliferate on an unprecedented scale Insurer insolvency is not yet common but it is not unusual either And at the root of such failures often lies the compound failure of uncollectable reinsurance This important book proposes that a significant part of the emerging insurance crisis results from inadequate regulation of reinsurance In a detailed and cogent analysis of what an effective regulatory regime for reinsurance must entail the author examines such factors as the following direct supervision of reinsurers versus supervision of reinsurance policies models from developed countries US UK EU and international organisations Organization for Economic Cooperation and Development International Association of Insurance Supervisors the importance of taking legal and economic differences into account while applying models the problem of local

protectionism especially in developing countries the dismantling of trade barriers in the reinsurance industry global harmonization of reinsurance regulation the role of reinsurance intermediaries finite risk reinsurance insurance linked securities The author's concluding chapter presents an essential legal infrastructure that allows for efficiency security and individual market characteristics Professor Wang then applies this framework to the Taiwanese insurance market demonstrating convincingly how his proposed regime can solve specific problems while respecting Taiwan's distinct market environment As a meticulously considered appraisal of and solution to a world problem that is growing quickly and uncontrollably Reinsurance Regulation will be of immense value to lawyers professors academics and officials who deal with any facet of economic law

**Rethinking Regulation of International Finance** Uzma Ashraf Barton, 2016-04-24 Why have financial standards and institutions almost always failed to effectively predict and respond to real world financial crises The answer this challenging book shows is that international financial law suffers from a persistent lack of judicial or quasi-judicial enforcement mechanisms leaving flaws in the structure of the international financial system that lead inevitably to excesses that threaten the public good of global financial stability The author an internationally renowned legal expert on financial and fiscal reforms responds to the increasingly urgent call for rethinking the structure and the functioning of international financial law Centering on the concept of enforcement which continues to be an unresolved issue in the discipline of international financial law the analysis describes the likely contours of hard law regulatory reform It weighs the pros and cons of much talked about regulatory and policy issues like the following and more policy implications from the transformation of finance from a domestic to an international concept new or revised supervisory and regulatory bodies with redefined mandate jurisdictions and powers possibility of a treaty based structure similar to the European Union's integration framework and consolidation of crisis prevention and crisis management policies The analysis takes into account instances from trade and monetary systems pertinent to the development of the discipline of international financial law A concluding chapter explores possibilities for putting in place an asset backed resilient financial system based on risk sharing

and empowered to legislate reform and authorized to seek compliance from its members With its provision of unconventional alternatives for further development of international financial law to realize stable predictable and robust international markets including early warning systems and fully primed crisis prevention mechanisms the book explores the essential link between global financial stability effective regulation and institutional development that will engender realistic global policy solutions It will prove to be of great importance to regulatory and legal practitioners as well as to academic and think tank scholars

**Eco-finance** Paul A. U. Ali, Kanako Yano, 2004-01-01 Market based environmental instruments are the most creative of the many initiatives devised to combat air and water pollution and promote biodiversity Among these none has attracted more attention than the burgeoning trade in environmental allowances and credits Originally developed in the United States around 1990 these varieties of tradable instruments were globally validated by the Kyoto Protocol of 1997 which explicitly contemplates the buying and selling of environmental allowances and credits among both sovereign states and corporate entities Despite U S opposition to the Kyoto Protocol global trading in pollution instruments is growing at an exponential rate with instruments representing over 70 million tonnes of greenhouse gas

emissions estimated to have been traded in 2003 Eco Finance is the first in depth legal analysis of this extraordinary hybrid of environmental regulation and global financial markets It deals with what are currently the two dominant types of market based environmental instruments market traded environmental instruments which include the tradable pollution allowances envisaged by the Kyoto Protocol and environmental financing instruments which include the emerging class of environmental and socially responsible investment funds Among the numerous topics and issues treated by Ali and Yano are the following the cap and trade regime debt for environment swaps forestry securitisations greenhouse gas emissions markets carbon funds and swaps tradable green certificates weather derivatives duty to hedge climatic risks catastrophe bonds protected cell companies the prudent investor rule and ethical security indices The authors deal searchingly with the critical legal issues that arise in connection with these market based environmental instruments such as the danger that courts might recharacterise underlying risk transfer agreements as illegal insurance products For this reason and for its wealth of practical theoretical and informational detail Eco Finance will be of enormous value to a broad range of legal governmental and business professionals including environmental regulators securities regulators financial market professionals institutional and other fiduciary investors corporate risk managers and investment fund managers as well as practitioners and academics in both environmental law and financial law

Global Financial Stability Report, October 2015 International Monetary Fund. Monetary and Capital Markets Department, 2015-10-07 The October 2015 Global Financial Stability Report finds that despite an improvement in financial stability in advanced economies risks continue to rotate toward emerging markets The global financial outlook is clouded by a triad of policy challenges emerging market vulnerabilities legacy issues from the crisis in advanced economies and weak systemic market liquidity With more vulnerable balance sheets in emerging market companies and banks firms in these countries are more susceptible to financial stress economic downturn and capital outflows Recent market developments such as slumping commodity prices China's bursting equity bubble and pressure on exchange rates underscore these challenges The prospect of the U S Federal Reserve gradually raising interest rates points to an unprecedented adjustment in the global financial system as financial conditions and risk premiums normalize from historically low levels alongside rising policy rates and a modest cyclical recovery The report also examines the factors that influence levels of liquidity in securities markets as well as the implications of low liquidity Currently market liquidity is being supported by benign cyclical conditions Although it is too early to assess the impact of recent regulatory changes on market liquidity changes in market structure such as larger holdings of corporate bonds by mutual funds appear to have increased the fragility of liquidity Finally the report studies the growing level of corporate debt in emerging markets which quadrupled between 2004 and 2014 The report finds that global drivers have played an increasing role in leverage growth issuance and spreads Moreover higher leverage has been associated with on average rising foreign currency exposures It also finds that despite weaker balance sheets firms have managed to issue bonds at better terms as a result of favorable

financial conditions      **Transnational Financial Associations and the Governance of Global Finance** Heather McKeen-Edwards, Tony Porter, 2013-02-11 The role of business in global governance is now widely recognized but exploration of its role in global financial governance has been more haphazard than systematic This book provides the first comprehensive analysis of the role of transnational financial associations TFAs in the organization of global finance This book develops three theoretical themes of assemblage functionality and power as enrolment These themes challenge approaches that treat financial power as emanating from a single location or force Whilst existing approaches tend to treat TFAs as irrelevant or as merely transmitting power originating elsewhere this book argues that power must be created by painstakingly assembling actors networks and objects that are often quite autonomous and working at cross purposes to one another a process in which TFAs play a central role The book explores these themes in chapters examining the roles of TFAs in interacting with public authorities constructing global financial markets and creating financial communities The authors additionally analyse the roles of TFAs in the European Union in the Global South and in promoting goals other than profitability including Islamic finance microfinancing savings banks and cooperatives Making a distinctive contribution to our understanding of global finance and global governance *Transnational Financial Associations and the Governance of Global Finance* is an important book for students and scholars of international political economy finance global governance and international relations      **Determinants of Sovereign Bond Spreads in Emerging Markets** Mr. Balazs Csonto, Mr. Iryna V. Ivaschenko, 2013-07-10 We analyze the relationship between global and country specific factors and emerging market debt spreads from three different angles First we aim to disentangle the effect of global and country specific developments and find that while both country specific and global developments are important in the long run global factors are main determinants of spreads in the short run Second we investigate whether and how the strength of fundamentals is related to the sensitivity of spreads to global factors Countries with stronger fundamentals tend to have lower sensitivity to changes in global risk aversion Third we decompose changes in spreads and analyze the behavior of explained and unexplained components over different periods To do so we break down fitted changes in spreads into the contribution of country specific and global factors as well as decompose changes in the residual into the correction of initial misalignment and an increase decrease in misalignment We find that changes in spreads follow periods of tightening widening which are well explained by the model and the dynamics of the components of the unexplained residual follow all the major developments that impact market sentiment In particular we find that in the periods of severe market stress such as during the intensive phase of the Eurozone debt crisis global factors tend to drive changes in the spreads and the misalignment tends to increase in magnitude and its relative share in actual spreads      *Managing Risk in the Financial System* John Raymond LaBrosse, Rodrigo Olivares-Caminal, Dalvinder Singh, 2011-01-01 Incisive authoritative and thoughtful this important and timely collection of papers exploring the unresolved issues left by the recent global financial turmoil will undoubtedly shape the policy responses
