Disposal of Weapon Plutonium E.R. Merz, Carl E. Walter, 1995-12-31 This NATO Advanced Research Workshop on Disposal of Weapons Plutonium is a follow up event to two preceding workshops each dealing with a special subject within the overall disarmament issue Disposition of Weapon Plutonium sponsored by the NATO Science Committee The first workshop of this series was held at the Royal Institute of International Affairs in London on 24-25 January 1994 entitled Managing the Plutonium Surplus Applications and Options Its overall goal was to clarify the current situation with respect to plutonium characteristics and availability the technical options for use or disposal and their main technical environmental and economic constraints In the immediate term plutonium recovered from dismantled nuclear warheads will have to be stored securely and under international safeguards if possible In the intermediate term the principal alternatives for disposition of this plutonium are irradiation in mixed oxide MOX fuel assemblies in existing commercial light water reactors or in specially adapted light water reactors capable of operation with full cores of MOX fuel and irradiation in future fast reactors Another option is to blend plutonium with high level waste as it is vitrified for final disposal in a geologic repository In both cases the high radioactivity of the resulting products provides self shielding and prevents separation of plutonium without already developed and available sophisticated technology The so called spent fuel standard as an effective protection barrier is required in either case *Energy Technologies for the 21st Century* International Energy Agency, 1997

Future Spacecraft Propulsion Systems and Integration Paul A. Czysz, Claudio Bruno, Bernd Chudoba, 2017-08-30 The updated and expanded third edition of this book focuses on the multi disciplinary coupling between flight vehicle hardware alternatives and enabling propulsion systems It discusses how to match near term and far term aerospace vehicles to missions and provides a comprehensive overview of the subject directly contributing to the next generation space infrastructure from space tourism to space exploration This holistic treatment defines a mission portfolio addressing near

term to long term space transportation needs covering sub orbital orbital and escape flight profiles In this context a vehicle configuration classification is introduced covering alternatives starting from the dawn of space access A best practice parametric sizing approach is introduced to correctly design the flight vehicle for the mission This technique balances required mission with the available vehicle solution space and is an essential capability sought after by technology forecasters and strategic planners alike
