Freud (RLE: Freud) Reuben Fine, 2013-10-08 In this book originally published in 1963 Dr Fine sets out to describe what Freud said and to re evaluate his views critically in the light of the best knowledge of the time Freud s numerous changes of view his constant searching for the truth wherever it might lead him as well as his resolute adherence to certain hard won positions once he had achieved them are all skilfully traced Freud s intellectual Odyssey is divided into four periods From 1886 to 1895 he was a neurologist investigating hysteria and other nervous disorders Then came his self analysis from 1896 to 1899 the real matrix from which psycho analysis grew The first psycho analytic system of psychology was developed in the period from 1900 to 1914 The remainder of his life from 1914 to 1939 was devoted to the elaboration of ego psychology and heart of contemporary psycho analysis Dr Fine undertook in writing this book the formidable task of examining the whole body of Freud s thought to clarify what he said and to review his ideas critically in the light of the best available existing knowledge As he says In this process of criticism I have tried to specify which aspects of Freud have stood the test of time and which have not So far as I can see no one has ever before taken the trouble to ask What did Freud actually say How does what Freud said stand up in terms of what we now know In answering these questions Dr Fine develops a major thesis that all modern psycho analysis derives from Freud though it has moved far in many different directions The contention is that emphasis on schools is misleading and has obscured the actual historical growth of the science As he states in his Preface to this volume Dr Fine s conviction is By building on Freud s fundamental insights we can move on most readily to empirical research and thus construct a more satisfactory science of psychology

at the weather when you step out look at men s faces when you step in Recognizing expressions is a very common activity in daily life People can infer someone s inner emotions from his or her facial expressions However not everyone writes their emotion on their face someone may suppress true emotion and express a false facial expression depending on politeness context culture or status The suppressed expressions can be expressed fleetingly in the form of microexpressions which usually last only 1/25 to 1/5 second Microexpressions were of importance for many practical applications because it reflects the true inner feeling such as national security deception detection clinical therapy emotion analysis and human computer interaction The recognition of microexpressions is the premise of application of microexpression and now the recognition of microexpressions are getting more and more attention However perceiving other s microexpressions is not easy The context culture and perceiver himself affect the recognition of microexpression There are considerable efforts in the field of psychology neuroscience and computer science to recognize facial microexpressions This Research Topic illuminates the latest advances in interdisciplinary understanding how microexpressions are perceived and recognized The authors contribute from diverse perspectives in the current research topic by using behavioral experiment EEG fMRI and computer vision techniques They investigated how humans recognize macroexpressions and microexpressions in term of modulating factors e g gender duration and the underlying neural mechanisms and how machine recognition algorithms and models are developed and inspired by the human recognition data The Research Topic reveals that research on the recognition of microexpressions is diverse but progressing This is not surprising given that this topic receives more and more attention due to its promising potential applications As new techniques and theories develop it is likely that efficient and effective algorithms for recognizing microexpression will become possible We hope that these articles provide a look into that future

changed the lives of millions of people around the world The effects of the global pandemic on the physical and psychological health of individuals as well as on their behavioral habits relationships and the way they communicate do not seem to be only short or medium term but on the contrary appear to be long lasting In the same way that it is possible to use the term long covid to refer to the long term effects on the physical health of individuals who have contracted the virus so we think it is possible to use the expression psychological long covid to indicate the long term effects on the psychological health of individuals not only of those who have been infected but more generally of all those who have had to cope with social restrictions lockdowns distancing remote work and learning etc imposed by the pandemic At the same time many people demonstrated resilience as the capacity to cope with adverse events through positive adaptation
