Financial Models and Society Ekaterina Svetlova, 2018-02-23 This innovative book employs the social studies of finance approach which aims to enhance the dialogue between finance and sociology by addressing the blind spots of economic and financial theories In so doing it challenges the accusations made towards financial models in the aftermath of the last economic crisis and argues

that they cannot be condemned indiscriminately Their influence on markets and society is not straightforward but determined by the many ways in which models are created and then used Ekaterina Svetlova analyses the various patterns of the application of models in asset management risk management and financial engineering to demonstrate that their power is far more fragile than widespread criticism would indicate

The Politics of Scientific Advice Justus Lentsch, Peter Weingart, 2011-06-02 Controversies over issues such as genetically engineered food foot and mouth disease and the failure of risk models in the global financial crisis have raised concerns about the quality of expert scientific advice The legitimacy of experts and of the political decision makers and policy makers whom they advise essentially depends on the quality of the advice But what does quality mean in this context and how can it be achieved This volume argues that the quality of scientific advice can be ensured by an appropriate institutional design of advisory organisations Using examples from a wide range of international case studies including think tanks governmental research institutes agencies and academies the authors provide a systematic guide to the major problems and pitfalls encountered in scientific advice and the means by which organisations around the world have solved these problems

Experts and Consensus in Social Science Carlo Martini, Marcel Boumans, 2014-09-11 This book brings together the research of philosophers sociologists and social scientists It examines those areas of scientific practice where reliance on the subjective judgment of experts and practitioners is the main source of useful knowledge to address and possibly bring solutions to social problems A common phenomenon in applications of science is that objective evidence does not point to a single answer or solution to a problem Reliance on subjective judgment then becomes necessary despite the known fact that hunches even those of putative experts often provide information that is not very accurate and that experts are prone to fallacies and biases The book looks at how experts reach consensus in the social sciences and which experts are relevant to which problems It aims to answer many questions the main one being Can we start building a normative theory of expertise on the basis of the evidence that social scientists sociologists and philosophers have uncovered

The Provoked Economy Fabian Muniesa,2014-05-16 Do things such as performance indicators valuation formulas consumer tests stock prices or financial contracts represent an external reality Or do they rather constitute in a performative fashion what they refer to The Provoked Economy tackles this question from a pragmatist angle considering economic reality as a ceaselessly provoked reality It takes the reader through a series of diverse empirical sites from public administrations to stock exchanges from investment banks to marketing facilities and business schools in order to explore what can be seen from such a demanding standpoint It demonstrates that descriptions of economic objects do actually produce economic objects and that the simulacrum of an economic act is indeed a form of realization It also shows that provoking economic reality means facing practical tests in which what ought to be economic or not is subject to elaboration and controversy This book opens paths for empirical investigation in the social sciences but also for the philosophical renewal of the critique of economic reality It will be useful for students and scholars in social theory sociology anthropology philosophy and economics

Fact and Fiction in Economics Maki,2002-12-12 There is an embarrassing polarization of opinions about the status of economics as an

academic discipline as reflected in epithets such as the Dismal Science and the Queen of the Social Sciences This collection brings together some of the leading figures in the methodology and philosophy of economics to provide a thoughtful and balanced overview of the current state of debate about the nature and limits of economic knowledge Authors with partly rival and partly complementary perspectives examine how abstract models work and how they might connect with the real world they look at the special nature of the facts about the economy and they direct attention towards the academic institutions themselves and how they shape economic research These issues are thus analysed from the point of view of methodology semantics ontology rhetoric sociology and economics of science
