**Emerging Strategies in Neuroprotection** Manangos,Lal,2013-11-21 SOLOMON H SNYDER Receptor Research Reaches Neurology Relevance to Neurodegenerative Diseases and Stroke President George Bush has heralded the 1990s as the decade of the brain based largely on the rapid escalation of advances in the molecular neuro sciences and the likelihood that these will bear therapeutic fruit before the turn of the century There is little doubt that the 1970s and 1980s have witnessed more remarkable advances in the molecular neurosciences than all of the preceding hundred years Identification of receptor sites for drugs and neurotransmitters along with simple sensitive and specific means of monitoring them has made it possible to elucidate the mechanism of action for many known drugs and to identify new chemical entities as potential therapeutic agents At the same time the numbers of distinct neurotransmitters have multiplied Prior to 1970 only the biogenic amines were well accepted as transmitters The early 1970s witnessed the gradual acceptance of amino acids as major excitatory and inhibitory neurotransmitters Identification of opiate receptors and the subsequent identification of the enkephalins as their endogenous ligands led to an appreciation of peptides as putative transmitters and the accumulation of as many as a hundred neuropeptides by the decade s end In the 1980s the revolutions of molecular biology have been applied aggressively to the neurosciences with molecular cloning for neuropeptide precursors many important neurochemical enzymes and receptors for numerous transmitters

**Neuroinflammation** Paul L. Wood,2002-12-18 In this thoroughly updated and revised edition of his much praised book Paul L Wood and a panel of leading researchers capture these new developments in a masterful synthesis of what is known today about the inflammatory

mediators and cells involved in neurodegenerative diseases This second edition contains extensive updates on the mediators produced by microglia and their role in neuroinflammatory induced neuronal lysis There is also increased coverage of the animal models used in the study of neuroinflammatory mechanisms of the new imaging methods that allow the noninvasive evaluation of microglial activation in human neurodegenerative disorders and of the role of neuroinflammation in amyloid dependent neuronal lysis

**Molecular Basis and Emerging Strategies for Anti-aging Interventions** Syed Ibrahim Rizvi,Ufuk Çakatay,2018-11-02 This book describes the nature of aging age related disorders and the molecular principles of emerging strategies for anti aging interventions while also discussing the discovery of targets for geroprotective drugs Although significant medical advances in the treatment and eradication of life threatening conditions such as cardiovascular and infectious disease have been made over the past five decades the prevalence of age related disorders still remains high in older populations Intervening into aging is the next frontier in contemporary medicine and will be of increasing importance over time as other sources of poor health are combated more and more successfully Given the universal interest in anti aging strategies the book will appeal to a very broad audience It addresses a diverse range of anti aging interventions including stem cells autophagy senolytics anti inflammatory methods and telomerase induction that will be of interest to scientists and researchers from various disciplines in the life sciences

*Neuroprotective Signal Transduction* Mark P. Mattson, 1997-10-10 In *Neuroprotective Signal Transduction* prominent researchers and clinicians focus on how inter and intracellular signaling mechanisms prevent the degeneration and death of neurons occurring in both acute and chronic neurodegenerative disorders Authoritative contributions dissect the signaling pathways of an array of neuroprotective factors ranging from neurotrophins NGF BDNF NT 3 and NT 4 5 to growth factors bFGF IGF 1 GDNF to cytokines TNF IL 1b and TGFb to secreted amyloid precursor proteins to protease nexin 1 Also treated are cytoprotective signaling events that occur within injured neurons independently of intercellular signals

*Neuroprotective Signal Transduction* presents fundamental cutting edge treatment of the cellular and molecular signal transduction pathways found in human neurodegenerative conditions The book s elucidation of the molecular cascades evolved by the nervous system to protect itself is now lead to effective strategies for preventing neuronal degeneration in such conditions as stroke traumatic brain injury Alzheimer s disease Parkinson s disease Huntington s disease and amyotrophic lateral sclerosis and will form the basis for powerful new drug discovery and gene therapy strategies
