Emissions Trading Environmental Policy's New Approach:

Emissions Trading for Climate Policy Bernd Hansjürgens, 2005-07-28 The 1997 Kyoto Conference introduced emissions trading as a policy instrument for climate protection Bringing together scholars in the fields of economics political science and law this book which was originally published in 2005 provides a description analysis and evaluation of different aspects of emissions trading as an instrument to control greenhouse gases The authors analyse theoretical aspects of regulatory instruments for climate policy provide an overview of US experience with market based instruments draw lessons from trading schemes for the control of greenhouse gases and discuss options for emissions trading in climate policy They also highlight the background of climate policy and instrument choice in the US and Europe and the foundation of systems in Europe particularly the EU's directive for a CO₂ emissions trading system

Emissions Trading Ralf Antes, Bernd Hansjürgens, Peter Letmathe, 2008-07-01 Emissions trading challenges the management of companies in an entirely new manner Not only does it like other market based environmental policy instruments allow for a bigger flexibility in management decisions concerning emission issues More importantly it shifts the mode of governance of environmental policy from hierarchy to market But how is this change reflected in management processes decisions and organizational structures The contributions in this book discuss the theoretical implications of different institutional designs of emissions trading schemes review schemes that have been implemented in the US and Europe and evaluate the range of investment decisions and corporate strategies which have resulted from the new policy framework

Emissions Trading Richard F. Kosobud, Douglas L. Schreder, Holly M. Biggs, 2000-01-28 Authoritative comprehensive accessible the definitive guide to a new approach in environmental policy *Emissions Trading Environmental Policy's New Approach* presents the work of an outstanding group of contributors on the successes and limitations of this new and exciting incentive based tool for reducing environmental pollutants By including the comments of emitters regulators public interest group representatives and academics the book reveals the criticisms disagreements and growing resolution of numerous environmental questions including Can markets be used to correct market environmental failure Will decentralized decisions by emitters produce an improvement in air quality Can this approach realize significant control cost savings Can emissions trading be monitored and enforced effectively at a reduced cost Will affected groups support this dramatic innovation Supported with sound analytical thinking and careful consideration of the evidence *Emissions Trading* presents an open and candid discussion of the issues and choices that lie ahead As emissions trading is extended to air pollutants such as nitrogen oxides and carbon dioxide the data and information contained in this book will become even more important and compelling for anyone interested in matters destined to have a profound impact on the economy the environment and public health

Management and Development Plan and Spineflower Conservation Plan ,2009 New Approaches on Energy and the Environment Richard D. Professor Morgenstern,Paul Professor Portney,2010-09-30 Written by economists and policy analysts at Resources for the Future a Washington DC think tank with a tradition for independent objective research this collection of twenty five memos to the President offers constructive policy options for the elected administration on critical challenges related to energy the environment and natural resources Each contributor to New Approaches on Energy and the Environment was asked to address the question Based on your research and knowledge what policy recommendation would you like to make to the next U S president Writing in advance of the 2004 election so as to keep their essays free of partisan interpretations the authors were asked not to confine their suggestions to what the prevailing wisdom says is politically possible They also took pains to make their ideas accessible to a busy president as well as a wide range of readers interested in a concise and authoritative overview of the nation s energy and environmental policy choices The results are provocative sometimes controversial but highly readable essays on topics including climate change oil dependency electricity regulation brownfields revitalization forest service administration air and water quality and environmental health issues such as food safety and the growing threat of antibiotic resistance When the President takes office in January 2005 he will confront competing perspectives about the priorities and approaches that should apply to energy and environmental policy Americans want cleaner air and water and healthy and attractive surroundings but they also want inexpensive fuel comfortable cars and houses and continued economic growth New Approaches on Energy and the Environment provides thought provoking commonsense contributions to debates about important energy and environmental issues confronting the U S today The Economics of Climate Change in China Fan Gang,Nicholas Stern,Ottmar Edenhofer,Xu Shanda,Klas Eklund,Frank Ackerman,Lailai Li,Karl Hallding,2013-09-13 China faces many modernization challenges but perhaps none is more pressing than that posed by climate change China must find a new economic growth model that is simultaneously environmentally sustainable can free it from its dependency on fossil fuels and lift living standards for the majority of its population But what does such a model look like And how can China best make the transition from its present macro economic structure to a low carbon future This ground breaking economic study led by the Stockholm Environment Institute and the Chinese Economists 50 Forum brings together leading international thinkers in economics climate change and development to tackle some of the most challenging issues relating to China s low carbon development This study maps out a deep carbon reduction scenario and analyzes economic policies that shift carbon use and shows how China can take strong and decisive action to make deep reductions in carbon emission over the next forty years while maintaining high economic growth and minimizing adverse effects of a low carbon transition Moreover these reductions can be achieved within the finite global carbon budget for greenhouse gas emissions as determined by the hard constraints of climate science The authors make the compelling case that a transition to a low carbon economy is an essential part of China s development and modernization Such a

transformation would also present opportunities for China to improve its energy security and move its economy higher up the international value chain. They argue that even in these difficult economic times climate change action may present more opportunities than costs. Such a transformation for China and the rest of the world will not be easy. But it is possible, necessary, and worthwhile to pursue.

Cost-Effective Control of Urban Smog Richard Kosobud, Houston Stokes, Carol Tallarico, Brian Scott, 2006-11-22. Written by a leading author in the field, this book containing rigorous hard evidence is of practical use to those studying or working in the pioneering cap and trade market to reduce emissions in a more flexible and cost effective manner.

Acid in the Environment Gerald R. Visgilio, Diana M. Whitelaw, 2007-04-13. The Goodwin Niering Center for Conservation Biology and Environmental Studies at Connecticut College is a comprehensive interdisciplinary program that builds on one of the nation's leading undergraduate environmental studies programs. The Center fosters research, education, and curriculum development aimed at understanding contemporary ecological challenges. One of the major goals of the Goodwin Niering Center involves enhancing the understanding of both the College community and the general public with respect to ecological, political, social, and economic factors that affect natural resource use. To this end, the Center has offered five conferences at which academicians, representatives of federal and state government, and individuals from non-government environmental organizations are brought together for an in-depth interdisciplinary evaluation of important environmental issues. On April 1 and 2, 2005, the Center presented the Elizabeth Babbott Conant interdisciplinary conference on Acid in the Environment: Lessons Learned and Future Prospects. The Connecticut Institute of Water Resources at the University of Connecticut, the Connecticut Chapter of The Nature Conservancy, and the Connecticut Sea Grant College Program joined the Center as conference sponsors. During the past twenty-five years, acid rain, formally referred to as acid deposition, has been the focus of much political debate and scholarly research. Acid deposition occurs when important precursor pollutants such as sulfur dioxide (SO₂) and nitrogen oxides (NO_x) mix with water vapor and oxidants in the atmosphere and fall back to earth in either wet or dry form.
