Emissions Trading Programs:

Emissions Trading Thomas Tietenberg, 2010-09-30 First published in 1985 Emissions Trading was a comprehensive review of the first large scale attempt to use economic incentives in environmental policy in the U S and of the empirical and theoretical research on which this approach is based Since its publication it has consistently been one of the most widely cited works in the tradable permits literature The second edition of this classic study of pollution reform considers how the use of transferable permits to control pollution has evolved looks at how these programs have been implemented in the U S and internationally and offers an objective evaluation of the resulting successes failures and lessons learned over the last twenty five years

Emissions Trading Programs Thomas H. Tietenberg, Tom Tietenberg, 2001 A comprehensive collection of leading articles important in the development of the use of emissions trading to control air pollution from its earliest implementation in the USA in 1976 to its application to global warming in the Kyoto Protocol Each volume offers an introduction by the editor Tom Tietenberg presenting a history of the evolution of the field as well as a guide to the collected papers that follow Volume One contains the theoretical and empirical work that underpinned the development of this particular policy instrument as well as a discussion of some of the major design issues Volume Two focuses on

implementation and presents examples of the major programs now in existence **Emissions Trading for Climate Policy** Bernd Hansjürgens, 2005-07-28 The 1997 Kyoto Conference introduced emissions trading as a policy instrument for climate protection Bringing together scholars in the fields of economics political science and law this book which was originally published in 2005 provides a description analysis and evaluation of different aspects of emissions trading as an instrument to control greenhouse gases The authors analyse theoretical aspects of regulatory instruments for climate policy provide an overview of US experience with market based instruments draw lessons from trading schemes for the control of greenhouse gases and discuss options for emissions trading in climate policy They also highlight the background of climate policy and instrument choice in the US and Europe and the foundation of systems in Europe particularly the EU s directive for a CO2 emissions trading system

Emissions Trading Ralf Antes, Bernd Hansjürgens, Peter Letmathe, 2008-07-01 Emissions trading challenges the management of companies in an entirely new manner Not only does it like other market based environmental policy instruments allow for a bigger flexibility in management decisions concerning emission issues More importantly it shifts the mode of governance of environmental policy from hierarchy to market But how is this change reflected in management processes decisions and organizational structures The contributions in this book discuss the theoretical implications of different institutional designs of emissions trading schemes review schemes that have been implemented in the US and Europe and evaluate the range of investment decisions and corporate strategies which have resulted from the new policy framework

Environmental Commodities Markets and Emissions Trading Blas Luis Pérez Henríquez, 2013-03-05 Market based solutions to environmental problems offer great promise but require complex public

policies that take into account the many institutional factors necessary for the market to work and that guard against the social forces that can derail good public policies Using insights about markets from the new institutional economics this book sheds light on the institutional history of the emissions trading concept as it has evolved across different contexts It makes accessible the policy design and practical implementation aspects of a key tool for fighting climate change emissions trading systems ETS for environmental control Blas Luis P rez Henr quez analyzes past market based environmental programs to extract lessons for the future of ETS He follows the development of the emissions trading concept as it evolved in the United States and was later applied in the multinational European Emissions Trading System and in sub national programs in the United States such as the Regional Greenhouse Gas Initiative RGGI and California s ETS This ex post evaluation of an ETS as it evolves in real time in the real world provides a valuable supplement to what is already known from theoretical arguments and simulation studies about the advantages and disadvantages of the market strategy Political cycles and political debate over the use of markets for environmental control make any form of climate policy extremely contentious P rez Henr quez argues that despite ideological disagreements the ETS approach or more popularly cap and trade policy design remains the best hope for a cost effective policy to reduce GHG emissions around the world

Greenhouse Gas Emissions Trading and Project-based Mechanisms OECD, 2004-01-19 This book presents a selection of papers from an international workshop co sponsored by the OECD and Concerted Action on Tradeable Emissions Permits CATEP to discuss key research and policy issues relating to the design and implementation of these instruments

Using Emissions Trading to Combat Climate Change David Harrison, Per Klevnas, Albert L. Nichols, Daniel Radov, 2008 Emissions trading has emerged as the major policy approach for addressing climate change as evidenced by programs and proposals in the Australia Europe the United States and elsewhere A host of choices need to be made to design and implement a greenhouse gas emissions trading program choices that are important both to the performance of the program and to the many private firms and groups that are affected This article provides an overview of the major programs and proposals and summarizes the key design choices that governments will be making We note that private firms and sectors need to understand how their costs and revenues might be affected by greenhouse gas cap and trade programs including differences depending upon various policy alternatives and to determine how to take advantage of the flexibility provided by emissions

trading The development of a carbon market as well as the other market effects of a climate change program also will affect key decisions such as the development of new capacity or the retirement of existing plants and equipment Understanding these influences will help firms and sectors to respond effectively and in the process allow the trading programs to achieve the goal of meeting key climate change objectives at lowest cost to society **Workshop on Progress Toward**

Schemes and Their Linking Asian Development Bank,2016-04-01 Asia and the Pacific has achieved rapid economic expansion in the recent years and has become a major source of greenhouse gas GHG emissions With more than half of the world s population and high rates of economic growth the region is especially vulnerable to the effects of climate change and therefore must play its part in cutting GHG emissions The Paris Agreement adopted last December 2015 at the United Nations Framework Convention on Climate Change COP21 aims to restrict global warming to well below 2 C above preindustrial levels and to pursue efforts to reach 1.5 C which is especially relevant to Asia and the Pacific region given its vulnerability This knowledge product highlights how robust policies on emissions trading systems ETS can be important tools in reducing GHG emissions in a cost effective manner as well as supporting the mobilization of finance together with deployment of innovative technologies There are currently 17 ETs in place in four continents and account for nearly 40% of global gross domestic product In Asia and the Pacific region there are 11 systems operating with more being planned The growing wealth of experience on ETs can be valuable to support DMCs that are planning and designing new systems of their own This knowledge product summarizes some of the most significant learning experiences to date and discusses some of the solutions to alleviate challenges that have been faced It also examines the possibilities for future linked carbon markets in the region **Study of Atmospheric Emission Trading Programs in the United States** Barakat &

Chamberlin,1991 **An Evaluation of Cap-and-trade Programs for Reducing U.S. Carbon Emissions** ,2001 This Congressional Budget Office CBO study written by Terry Dinan prepared at the request of the Senate Committee on Environment and Public Works examines four proposals All are variants of a cap and trade program in which policymakers would set a mandatory cap on carbon emissions and allow businesses to trade rights or allowances to those emissions

Emissions Trading, an Exercise in Reforming Pollution Policy Thomas H. Tietenberg,1985 **Tradable Emissions** United States. Congress. Joint Economic Committee,1997 *Code of Federal Regulations* ,2009 Special edition

of the Federal Register containing a codification of documents of general applicability and future effect with ancillaries

The Code of Federal Regulations of the United States of America, 2001 The Code of Federal Regulations is the codification of the general and permanent rules published in the Federal Register by the executive departments and agencies of the Federal Government Federal Register, 2012-06 *Regulatory Program of the United States Government* United States. Office of Management and Budget, 1985 *HC 739 - Linking Emissions Trading Systems* Great Britain. Parliament. House of Commons. Energy and Climate Change Committee, 2015 Carbon pricing is a necessary element in spurring climate change mitigation action In this report it is argued that emissions trading as an established and well recognised policy instrument for controlling greenhouse gas emissions is increasingly popular and spreading around the world As they develop emissions trading systems should be designed so that they are compatible with each other Aligning design elements early on will help improve the prospects of linking different systems in future and therefore maximise opportunities for cost effective emissions reductions As the world's oldest and largest market the EU Emission Trading System will play a critical role in facilitating linking between different markets Before it can do this however it must be seen as a credible market The issue of surplus allowances must be addressed urgently and there should be moves to remove these from the system as soon as possible Any new climate agreement must crucially allow parties to meet their Intended Nationally Determined Contribution's INDCs by transferring parts of their contributions to other parties and financing emissions reduction activities in other countries The use of carbon markets will greatly improve the prospects of keeping global average temperatures below 2 C Any agreement reached at the UNFCCC COP 21 in Paris at the end of 2015 should promote the use of carbon markets and facilitate the future linking of emissions trading systems The UNFCCC could also play a critical role in providing basic standards including monitoring reporting and verification **S. 981, the Regulatory Improvement Act of 1997** United States.
