Shedding light on crucial therapeutic variables in psychotherapy, it explores common and specific factors of therapeutic value that transcend individual methodologies and techniques. Timely and more relevant than ever, this Second Edition of *The Practice of Brief Psychotherapy* gives clinicians, counselors, and students an excellent and broad-based practical reference on brief psychotherapy, a powerful and flexible clinical tool for their work. Brief Existential Psychotherapy for Life Stress Massimo Biondi, 2025-06-13. The book presents a detailed description of brief existential psychotherapy (BEP) based on an articulated model integrating knowledge from existential psychotherapy, psychobiology of human stress, mind-body techniques, and principles of positive psychiatry and psychology. BEP is conducted according to a pragmatic method centered on the view of one's existence, analysis, and response to critical life stress events, designing a route of acceptance and search for meaning in life. BEP does not substitute other psychotherapies or their indications. It is born for the short-term treatment of crises after severe life stress events, such as deaths of loved ones, losses, divorce, retirement, personal or collective emotional traumas, major violations of law, and detention in jail, with a particular emphasis on severe somatic diseases (cancer, myocardial infarction, stroke, degenerative diseases) and other subacute or chronic conditions that change life's perspective. The volume presents a methodology of BEP based on traditional clinical

psychopathology with a first step of medical and psychopathological assessment establishing a categorical and a dimensional diagnosis. Then subsequent steps are provided in a brief psychotherapy course with a more common format of 12-20 sessions, 1hr duration. The issues and aims of treatment are transversal across different psychiatric diagnoses meaning the intervention follows similar activity lines independently from the specific categorical diagnosis. The intervention is dedicated to people with existential suffering without psychopathological diagnosis too. Medical therapy and psychopharmacological treatment are given according to patient needs; there is no preclusion toward the integration between psychotherapy and psychopharmacotherapy as well as other techniques with evidence of efficacy. Moreover, in some cases appropriate psychopharmacotherapy consents to psychotherapy impossible otherwise. This volume will be an invaluable tool for psychotherapists, psychologists, psychiatrists, counselors, social workers, and other medical professionals.

Being Empathic Steve Vincent, 2018-10-08. This is the most stimulating thorough in-depth work on empathy as originated and developed by Carl Rogers within client-centred therapy and the person-centred approach that a reader will find. It provides a rigorous look at empathic understanding with practical case illustrations throughout. What a cornucopia of offerings are provided in this book. The quotes and extracts from Rogers are always to the point and explorations of the concepts rich and original, each amplifying yet not changing Carl's meanings. This book has a unique format and style merging tradition with innovation and whimsy. It is both intellectually stimulating and very personal. I was delighted with the wit, humour, and plays on words. When compared with the reductionistic stereotypic depiction of Rogers' work in so many previous texts, outside the Person-Centred Approach community, this book is a breath of fresh air. I believe Steve has guided us with elegance and insight, wisdom and compassion towards deeper understandings of the genius and profundity of Carl Rogers' work and his principles. While the audience for this book might best be considered to be those in training as therapists or students using the book as a university text, it will also be most helpful for practitioners who want to review and renew a deeper understanding of Rogers' approach. Potential clients in seeking a safe haven for their deep explorations may also profit greatly from this book as a guide in their search.

Gay Leah Barfield in her Foreword

Progress in Self Psychology, V. 16 Arnold I. Goldberg, 2013-06-17. Volume 16 of Progress in Self Psychology. How Responsive Should We Be? illuminates the continuing tension between Kohut's emphasis on the patient's subjective experience and the post-Kohutian intersubjectivists' concern with the therapist's own subjectivity by focusing on issues of therapeutic posture and degree of therapist activity. Teicholz provides an integrative context for examining this tension by discussing affect as the common denominator underlying the analyst's empathy, subjectivity, and authenticity. Responses to the tension encompass the stance of intersubjective contextualism, advocacy of active responsiveness, and emphasis on the

thorough going bidirectionality of the analytic endeavor Balancing these perspectives are a reprise on Kohut's concept of prolonged empathic immersion and a recasting of the issue of closeness and distance in the analytic relationship in terms of analysis of the tie to the negative selfobject Additional clinical contributions examine severe bulimia and suicidal rage as attempts at self state regulation and address the self reparative functions that inhere in the act of dreaming Like previous volumes in the series volume 16 demonstrates the applicability of self psychology to nonanalytic treatment modalities and clinical populations Here self psychology is brought to bear on psychotherapy with placed children on work with adults with nonverbal learning disabilities and on brief therapy Rector's examination of twinship and religious experience Hagman's elucidation of the creative process and Siegel and Topel's experiment with supervision via the internet exemplify the ever expanding explanatory range of self psychological insights

Ronald R. Lee, Angie Rountree, Sally McMahon, 2010-12-02 In comparison with the traditional notion of science as generalizable and predictive knowledge Five Kohutian Postulates presents psychotherapy as a science of the unique It uses the philosopher Imre Lakatos emphasis on research programs that organize around a central postulate and auxiliary postulates to explicate Heinz Kohut s self psychology Kohut s psychotherapy theory entails four auxiliary postulates that are interlinked to the central postulate of empathic understanding and to each other The main chapters illustrate how these postulates function as orienting stars in theoretical space to foster a firm psychotherapeutic identity and to concurrently foster the inclusion of complementary ideas from other psychotherapy theories These chapters also reveal how self psychology exemplifies Lakatos s idea that the most valuable scientific theory is regenerative The last chapter points to the need for post modern psychoanalytic psychotherapy to take seriously the idea of a professional commitment to the patient
