Encyclopedia of Hurricanes, Typhoons, and Cyclones David Longshore, 2008 An A to Z reference to hurricanes typhoons cyclones and tropical storms contains four hundred entries that detail the science history and social impact of these severe weather phenomena **Encyclopedia of Hurricanes, Typhoons, and Cyclones**, 1998 **Hurricanes** Paul V.

Kislow, 2008 A hurricane is a tropical storm with winds that have reached a constant speed of 74 miles per hour or more Hurricane winds blow in a large spiral around a relative calm centre known as the eye The eye is generally 20 to 30 miles wide and the storm may extend outward 400 miles As a hurricane approaches the skies will begin to darken and winds will grow in strength As a hurricane nears land it can bring torrential rains high winds and storm surges A single hurricane can last for more than 2 weeks over open waters and can run a path across the entire length of the eastern seaboard August and September are peak months during the hurricane season that lasts from 1 June to 30 November This book presents the facts and history of hurricanes What are the potential causes of incorrect predictions of tropical cyclone intensification in medium-range ensemble forecasts? Nico Bauer, 2022-05-12 Tropical cyclones TC are the most destructive weather

phenomena in the world These storm systems are common in large parts of highly populated tropics and subtropics with favorable atmospheric conditions Society's vulnerability to them and the associated annual economic costs have risen steadily mean worldwide insured losses averaged 75 billion USD per year in the 10 years between 2009 and 2019 Cinco et al 2016 analyzed TC data and observed that in the period from 1951 to 2013 an average of 19.4 TCs entered the Philippine Area

of Responsibility in the Western North Pacific and nine TCs moved over the islands Consequently the Philippines have the highest number of landfalling storms and the highest rate of severe TC worldwide In turn the TCs that move over the islands into the South China Sea frequently affect the coast of Vietnam Through a spatial assessment of TC vulnerability Nguyen et al 2019 have demonstrated a high or very high susceptibility in most parts of coastal Vietnam The most extreme event over the WNP in the last century was Typhoon Haiyan which caused 6 300 deaths and widespread economic and socioeconomic damage This significant susceptibility implies the high importance of improving weather forecast models for greater predictive capability In recent decades the quality of forecasting tropical cyclone tracks has increased steadily at the European Center for Medium Range Weather Forecast and other numerical weather prediction centers Nevertheless intensity predictions still present more significant challenges
