Encyclopedia of Sciences and Religions Anne Runehov, Luis Oviedo, 2013-05-18 To all who love the God with a 1000 names and respect science In the last quarter century the academic field of Science and Theology Religion has attracted scholars from a wide variety of disciplines The question is which disciplines are attracted and what do these disciplines have to contribute to the debate In order to answer this question the encyclopedia maps the self identified disciplines and religious traditions that participate or might come to participate in the Science and Religion debate This is done by letting each representative of a discipline and tradition answer specific chosen questions. They also need to identify the discipline in relation to the Science and Religion debate Understandably representatives of several disciplines and traditions answered in the negative to this question Nevertheless they can still be important for the debate indeed scholars and scientists who work in the field of Science and Theology Religion may need knowledge beyond their own specific discipline Therefore the encyclopedia also includes what are called general entries Such entries may explain specific theories methods and topics The general aim is to provide a starting point for new lines of inquiry It is an invitation for fresh perspectives on the possibilities for engagement between and across sciences again which includes the social and human sciences and religions and theology This encyclopedia is a comprehensive reference work for scholars interested in the topic of Science and Religion It covers the widest spectrum possible of academic disciplines and religious traditions worldwide with the intent of laying bare similarities and differences that naturally emerge within and across disciplines and religions today The A Z format throughout affords easy and user friendly access to relevant information Additionally a systematic question answer format across all Sciences and Religions entries affords efficient identification of specific points of agreement conflict and disinterest across and between sciences and religions The extensive cross referencing between key words phrases and technical language used in the entries facilitates easy searches We trust that all of the entries have something of value for any interested reader Anne L C Runehov and Lluis Oviedo **Encyclopedia of Science and Religion**, 2003 Publisher description How do the latest medical developments affect our beliefs in faith s healing power Can artificial intelligence compare with human consciousness Are genetic engineers interfering with Nature s work This reference work deals with these questions and others examining the issues and the history associated with the complex relationship between science and religion Articles by scientists of many fields philosophers and thinkers from all the major world religions present a variety of perspectives on the major scientific discoveries of our time and their effects on our religious belief system The History of Science and

demonstrating that there is such a First Cause without requiring the controversial arguments against concrete infinities and against traversing an actual infinite although the book presents original defenses of these arguments as well This book also develops a novel philosophical argument for the Causal Principle namely that everything that begins to exist has a cause and offers a detailed discussion on whether a First Cause of time can be avoided by a causal loop It also addresses epistemological issues related to the Cosmological Argument which have been relatively neglected by recent publications and demonstrates contra Hawking et al the continual relevance and significance of philosophy for answering ultimate questions
