Paleontology in Ecology and Conservation Julien Louys,2012-04-25 The fossil record contains unique long term insights into how ecosystems form and function which cannot be determined simply by examining modern systems It also provides a record of endangered species through time which allow us to make conservation decisions based on thousands to millions of years of information The aim of this book is to demonstrate how palaeontological data has been or could be incorporated into ecological or conservation scientific studies This book will be written by palaeontologists for modern ecologists and conservation scientists Manuscripts will fall into one or a combination of four broad categories case studies review articles practical considerations and future directions This book will serve as both a how to guide and provide the current state of knowledge for this type of research It will highlight the unique and critical insights that can be gained by the inclusion of palaeontological data into modern ecological or conservation studies **Geological Survey Circular** ,1968

Rose,2016-10 The Carlisle Indian School 1879 1918 was an audacious educational experiment Lieutenant Richard Henry

Pratt the school's founder and first superintendent persuaded the federal government that training Native children to accept the white man's ways and values would be more efficient than fighting deadly battles. The result was that the last Indian war would be waged against Native children in the classroom. More than 8 500 children from virtually every Native nation in the United States were taken from their homes and transported to Pennsylvania. Carlisle provided a blueprint for the federal Indian school system that was established across the United States and also served as a model for many residential schools in Canada. The Carlisle experiment initiated patterns of dislocation and rupture far deeper and more profound and enduring than its founder and supporters ever grasped. Carlisle Indian Industrial School offers varied perspectives on the school by interweaving the voices of students, descendants, poets and activists with cutting edge research by Native and non Native scholars. These contributions reveal the continuing impact and vitality of historical and collective memory as well as the complex and enduring legacies of a school that still affects the lives of many Native Americans.

Beliefs and Rituals in Archaic Eastern North America Cheryl Claassen, 2015-06-15 Claassen's work focuses on the American Archaic period marked by the end of the Ice Age approximately 11 000 years ago and a geographic area bounded by the edge of the Great Plains, Newfoundland and southern Florida. This period and region share specific beliefs and practices such as human sacrifice, dirt mound burial and oyster shell middens. This interpretive guide serves as a platform for new interpretations and theories on this period. For example, Claassen connects rituals to topographic features and posits the Pleistocene-Holocene transition as a major stimulus to Archaic beliefs. She also expands the interpretation of existing data previously understood in economic or environmental terms to include how this same data may also reveal spiritual and symbolic practices. Similarly, Claassen interprets Archaic culture in terms of human agency and social constraint, bringing ritual acts into focus as drivers of social transformation and ethnogenesis.
