

Water utilities need to prepare and plan for all hazardous events that may impact their systems

By 2050, 70% of population in urban areas

Cities and their water utilities must take an active role in watershed management, as a disruption in the supply of freshwater resources to cities can have significant socio-economic, environmental and health consequences.

Climate change - Irregular patterns of water availability

Climate change will disrupt historical weather patterns and add an additional layer of uncertainty to long-term planning for water utilities and the populations they serve.

Population growth - Growing demand for resources

As global projections show a continued increase in population and urbanisation, that water utilities supplying cities will need to manage increasing demand for the resource.

Water users - Competition for water resources

Increased competition for limited water resources between different users means water utilities need to put in place measures to ensure continued provision of safe and secure water supply.
