Hierarchical Emergent Ontology and the Universal Principle of Emergence

Vladimír Havlík, 2022-04-12 This book offers a new look at emergence in terms of a hierarchical emergent ontology Emergence is recognised as a universal principle as universal as the principle of evolution This is achieved by setting out the ontological criteria of emergence and such criteria's various roles The traditional dichotomies are overcome e.g. the synchronic and diachronic perspectives are unified allowing a single universal principle of emergence to be applied across various fields of science As exemplars of its practical utility in both explanation and prediction this new approach is applied to three different scientific areas cellular automata quantum Hall effects and the neural network of the mind It proves that

the resulting metaphysics of hierarchical emergent ontology plays a fundamental role in unifying science an impossible task under classical reductionism

Heidegger and Homecoming Robert Mugerauer,2008-10-21 Martin Heidegger s philosophical works devoted themselves to challenging previously held ontological notions of what constitutes being and much of his work focused on how beings interact within particular spatial locations Frequently Heidegger used the motifs of homelessness and homecoming in order to express such spatial interactions and despite early and continued recognition of the importance of homelessness and homecoming this is the first sustained study of these motifs in his later works Utilizing both literary and philosophical analysis Heidegger and Homecoming reveals the deep figural unity of the German philosopher s writings by exploring not only these homecoming and homelessness motifs but also the six distinctive voices that structure the apparent disorder of his works In this illuminating and comprehensive study Robert Mugerauer argues that these motifs and Heidegger s many voices are required to overcome and replace conventional and linear methods of logic and representation Making use of material that has been both neglected and yet to be translated into English Heidegger and Homecoming explains the elaborate means with which Heidegger proposed that humans are able to open themselves to others while at the same time preserve their self identity

The Chironomidae P.D. Armitage,L.C. Pinder,P.S. Cranston,2012-12-06 The dipteran family Chironomidae is the most widely distributed and frequently the most abundant group of insects in freshwater with representatives in both terrestrial and marine environments A very wide range of

gradients of temperature pH oxygen concentration salinity current velocity depth productivity altitude and latitude have been exploited by at least some chironomid species and in grossly polluted environments chironomids may be the only insects present The ability to exist in such a wide range of conditions has been achieved largely by behavioural and physiological adaptations with relatively slight morphological changes It has been estimated that the number of species world wide may be as high as 15000 This high species diversity has been attributed to the antiquity of the family relatively low vagility leading to isolation and evolutionary plasticity In many aquatic ecosystems the number of chironomid species present may account for at least 50% of the total macroinvertebrate species recorded This species richness wide distribution and tolerance to adverse conditions has meant that the group is frequently recorded in ecological studies but taxonomic difficulties have in the past prevented non specialist identification beyond family or subfamily level Recent works including genetic studies have meant that the family is receiving much more attention globally *Morocco's Africa Policy* Yousra Abourabi,2024-05-13 Since the advent of the reign of Mohammed VI in 1999 Morocco has deployed a new continental foreign policy The Kingdom aspires to be recognized as an emerging African power in its identity as well as in its space of projection In order to meet these ambitions the diplomatic apparatus is developing and modernizing while a singular role identity is emerging around the notion of the golden mean This study presents on an empirical level the conditions of the elaboration and conduct of this Africa policy and analyzes on a theoretical level the evolution of the Moroccan role identity in the international system
