carbon sequestration caused by grazing Whom are we to believe This book shows us that the answer is not so clear cut Beginning with the implications of the UN s Livestock s Long Shadow report it breaks down the blind spots and highlights the insights of the most prominent pro meat arguments as well as of the push for a global switch to vegetarianism While advances in efficiency might reduce greenhouse gas emissions per unit of meat or milk produced attendant decreases in cost can enable overconsumption and thus produce more waste And while carbon sequestration is beneficial it is not a reliable cure all for the industry Due to the economics of farming however eliminating meat consumption may not even reduce emissions at all The truth about livestock production is much more nuanced but luckily also far more holistic The future of agricultural policy will have to take into consideration factors such as human health and economics as well as climate Eschewing ideology for empirical rigor this book paves an actionable path forward for both consumers and producers offering unique solutions for each livestock system and simple everyday adjustments for the average omnivore **Sexuality**
