**Economics of Cooperative Farming** Ferenc Fekete, 2013-06-29 The present scientific and technical revolution has brought science into the range of the most effective forces of production The formula science production force applies also to the social sciences whose explorations of human relationships and drives have reached previously unsuspected depths Objectives such as higher living standards and full employment economic growth and stability social equity and security have both called for and provided a basis for the exploitation of possibilities offered by the natural and technical sciences In today's agriculture age old traditions are in the process of disintegration but the heredity of a century or that of even a millennium as in Hungary does not get dissolved without defending itself Technical progress and social restratification the emergence of new scales of values and preferences the adjustment of the rural communities to their new tasks and conditions all these have transformed farm operations and farming techniques But agriculture even under its revolutionized surface still hides deep almost untouched layers If economists and agriculturalists are perplexed by the multitude and variety of the visible farm problems there exist many others about which they can only guess which they must follow up In formulating and solving these problems agricultural economists have professional tasks 1 facilitating the most efficient use of agricultural resources

from the standpoint of the national economy and 2 helping farmers and farm people to attain their stated socially feasible objectives **East Europe (Albania, Bulgaria, Czechoslovakia, East Germany, Hungary, Poland, Rumania, Yugoslavia)** ,1964 AgExporter ,1992 Agrarian Policies in Communist Europe K.-E. Wädekin,2024-09-02 Industry Agglomerations and Regional Development in Hungary Cordula Wandel,2010 In context with the Eastern enlargement of the European Union this research deals with the effects of pre and post enlargement integration policies on industry concentration and regional development in Hungary Economic processes are analysed empirically and by means of regression analyses with a spatial perspective and in the framework of the new economic geography over a time span of almost two decades The results for the manufacturing industries and for regional specialization show which economic centres played a role for the economic development of the country over time The roles which agglomerations and regional specialization can play are discussed with a view to the problems of cohesion in Hungary the enlarged EU and future EU accession countries The conclusions also take into account the current political and academic debate regarding European regional policy **Alternative Food Networks for Sustainable, Just, Resilient and Productive Food Systems** José Luis Vicente-Vicente,Lukas Egli,Felix Zoll,Simona Zollet,2024-10-01 There is growing evidence that the current globalised agri food system is neither sustainable nor resilient It is responsible for around one third of the global GHG emissions and is a major driver of biodiversity loss Furthermore its structure and distribution mode do not provide food security for all and foster socio economic inequalities between different parts of the planet Consequently an increasing number of scientists and members of the civil society are demanding a radical transformation of agri food systems The creation of alternative food networks AFNs represent a possible first step towards agri food system transformation AFNs can incorporate local indigenous and innovative knowledge and bring together a diversity of actors to connect food production and consumption and create new practices and relationships around food The creation of AFNs and ultimately of Alternative Food Systems AFS should involve different actors from farmers to social movements from policymakers to scientists AFNs have the potential to contribute to a transformation towards sustainable just resilient and productive food systems but even though they have increased in numbers and organisational forms in recent years they still remain in a niche Consequently scientific evidence of their performance is still limited This research topic will contribute to a comprehensive multi scalar and critical e g including potential counter effects understanding of the current state and future potential of AFNs It will address multiple aspects ranging from social economic and environmental aspects to productivity participation and justice Moreover it will highlight the role of governance power relations and institutions as well as barriers and ways forward to promote AFNs and their role in food system transformation **Education in Scandinavia, Switzerland, Holland, Hungary, &c** Great Britain. **The Sovietization of Rural Hungary, 1945-1980** József Ö. Kovács, Gergely Krisztián Horváth, Gábor Csikós, 2023-06-05 In this book the experiential history of the Soviet style social transformation projects between 1945 and 1980 is discussed through the example of rural Hungary The book interprets state socialism as a modernization project Existing socialism was a form of dictatorship in which authorities sought to transform the mentalities of their subjects from the individual level to the global scale This project depended on socio economic homogenization one important method of asserting state power was the transformation of property rights land redistribution collectivization Communist modernization discriminated against the inhabitants of rural areas who were the primary victims of collectivization and the discriminatory effects of the rules implemented by policymakers The resulting radical changes in peasant lifestyles would become a source of social pathologies However not the authorities but contemporary scholars considered the social costs of these actions The book aims at Weberian disenchantment and contributes to the deconstruction of the common image of Hungarian socialism the happiest barrack The intended audience includes readers at the graduate level in the fields of history political science and anthropology general readers interested in the history of communism It is hoped that the research questions inspire new research for exploring convergent and divergent elements in social transformation in former communist countries
