Principles and Applications of Modified Atmosphere Packaging of Foods B. Blakistone, 2013-12-14 Modified atmosphere packaging may be defined as an active packaging method in which an altered atmosphere is created in the headspace that retards chemical deterioration while simultaneously retarding growth of spoilage organisms Shelf lives of perishable products such as dairy products meat poultry fish fruits and vegetables and bakery items are limited by biochemical changes in the product catalysed by exposure to the normal atmosphere 21 % oxygen 78% nitrogen and less than 0.1 % carbon dioxide and growth of spoilage organisms Modification of the atmosphere within a package containing these products helps to better maintain the quality of the food under longer storage conditions and retards the growth of undesirable organisms Of course deterioration is also slowed by chilling which is required for the transport to market of highly perishable items like meat poultry and fish that would either spoil or have the potential for contamination by certain food pathogens Chilling plus a modification of the atmosphere optimizes the keeping quality of food Modification of the atmosphere has been known for over a century as a means of food preservation and has become a very popular means of food preservation in the latter part of the 20th century Modified atmosphere packaging MAP is practised extensively in Europe Canada and the US Both vacuum packaging removal of air from the package and addition of gases within the package are considered MAP

The Feasibility of Using Modified Atmospheres to Control Insect Pests in Museums Michael K. Rust, Janice M. Kennedy, 1993-12-01 Surveys of natural history and art museums indicate that beetles belonging to the families Anobiidae and Dermestidae and moths belonging to the family Tineidae are major pests Other groups such as termites and silverfish may also be extremely important especially in southeast Asia Current control recommendations include the use of space fumigation or surface residual spraying In addition to the need to train museum personnel to use these insecticides there is always the potential for damage to rare antiquities and artifacts The primary objectives of this study were to determine 1 if controlled or modified atmospheres were lethal and 2 to establish the minimum time required to provide 100% kill of all developmental stages of insects likely to infest materials objects and artifacts in museums
