Strong emphasis on the relationship between engineering and product quality safety. Links theory and practice. Considers topics in light of factors such as cost and environmental issues. Introduction to Food Process Engineering Albert Ibarz, Gustavo V. Barbosa-Canovas, 2014-04-10. Consumer expectations are systematically growing with demands for foods with a number of attributes which are sometimes difficult for manufacturers to meet. The engineering processes that are needed to obtain top quality foods are a major challenge due to the diversity of raw materials, intermediates and final products. As in any other enterprise, the food industry must optimize each of the steps in the production chain to attain the best possible results. There is no question that a very important aspect to take into consideration when developing a process, designing a food factory or

modifying existing facilities is the in depth knowledge of the basic engineering aspects involved in a given project

Introduction to Food Process Engineering covers the fundamental principles necessary to study understand and analyze most unit operations in the food engineering domain It was conceived with two clear objectives in mind 1 to present all of the subjects in a systematic coherent and sequential fashion in order to provide an excellent knowledge base for a number of conventional and unconventional processes encountered in food industry processing lines as well as novel processes at the research and development stages 2 to be the best grounding possible for another CRC Press publication Unit Operations in Food Engineering Second Edition by the same authors These two books can be consulted independently but at the same time there is a significant and welcomed match between the two in terms of terminology definitions units symbols and nomenclature Highlights of the book include Dimensional analysis and similarities Physicochemistry of food systems Heat and mass transfer in food Food rheology Physical properties Water activity Thermal processing Chilling and freezing Evaporation Dehydration Extensive examples problems and solutions *Fundamentals of Food Process Engineering* R. T. Toledo, 1999-07-21 Ten years after the publication of the first edition of *Fundamentals of Food Process Engineering* there have been significant changes in both food science education and the food industry itself Students now in the food science curriculum are generally better prepared mathematically than their counterparts two decades ago The food science curriculum in most schools in the United States has split into science and business options with students in the science option following the Institute of Food Technologists minimum requirements The minimum requirements include the food engineering course thus students enrolled in food engineering are generally better than average and can be challenged with more rigor in the course material The food industry itself has changed Traditionally the food industry has been primarily involved in the canning and freezing of agricultural commodities and a company's operations generally remain within a single commodity Now the industry is becoming more diversified with many companies involved in operations involving more than one type of commodity A number of formulated food products are now made where the commodity connection becomes obscure The ability to solve problems is a valued asset in a technologist and often solving problems involves nothing more than applying principles learned in other areas to the problem at hand A principle that may have been commonly used with one commodity may also be applied to another commodity to produce unique products Handbook of Food Science and Technology 2 Romain Jeantet, Thomas Croguennec, Pierre Schuck, Gérard Brule, 2016-03-03 This book is a source of basic and advanced knowledge in food science for students or professionals in the food science sector but it is also accessible for people interested in the different aspects concerning raw material stabilisation and transformation in food products It is an updated and translated version of the book *Science des aliments* published in 2006 by Lavoisier *Science des aliments* is a general and introductory food science and technology handbook based on the authors Masters and PhD courses and research experiences The book is concise pedagogical and informative and contains numerous illustrations approximately 500 original

figures and tables In three volumes it summarizes the main knowledge required for working in food industries as scientists technical managers or qualified operators It will also be helpful for the formation of students in food science and biotechnologies bachelor s and master s degree
