Clinical Skills in Treating the Foot Warren Turner, Linda M.

Merriman, 2005-08-17 The eagerly awaited new edition of Clinical Skills in Treating the Foot has been revised and updated with the needs of a broad range of health professionals in mind. For anyone treating patients with foot disorders, Clinical Skills in Treating the Foot will provide invaluable support through three key areas. Section 1 is concerned with the general principles of managing foot disorders and the context in which treatment of the foot takes place. Included are chapters on treatment planning, evidence-based practice, governance and audit, clinical protocols, clinical emergencies and health promotion. Section 2 examines the application of clinical therapeutics to foot disease and includes chapters on operative techniques, surgery and the foot, pharmacology, physical therapy, mechanical therapeutics, chairside devices, prescription devices and footwear therapy. Section 3 considers the particular needs of special groups and includes chapters on the adult foot, the child's foot, sports injuries and management of tissue viability. With its clarity of text and liberal use of case studies and illustrations, the latest edition of Clinical Skills will be required reading for practising and student podiatrists. It will also be a valuable reference and guide for all others involved in the provision of treatment of the foot. This book has been written as a companion volume to the editors' Assessment of the Lower Limb, also published by Elsevier Churchill Livingstone. Written by an experienced team of clinicians who also understand the needs of students as well as practitioners, logical and clear structure makes it easy to use for both clinicians and students. Each chapter is self-contained and can be used for independent reading topics. Case histories and clinical comment sections illustrate important clinical points. Key points and summaries provide assistance for learning and review. Features approximately 400 illustrations. Half of the contributors are new, more experienced clinicians than those used for the previous edition. Bone and Joint Disorders of the Foot and Ankle Maurice Bouysset, 2013-04-17 This encyclopedia on the pathology of the foot is to some extent a response to the wishes expressed in 1978 by the organizers of the Premieres Journees Europeennes de Podologie in Paris. In effect, they advocated a close collaboration between the diverse specialities of medicine and

orthopedics in the field of the study and treatment of affections of the foot with a view to an ever closer collaboration for the well being of the patients An increasing number of patients seek the help of the rheumatologist or orthopedist for disorders of the feet the clinician is then confronted either with a diagnostic problem when the foot is the organ primarily affected or a therapeutic problem when a sufferer from a well defined rheumatic disease is led to consult him for persistent pain Even if the pathology of the feet has often been neglected by the medical profession whereas the hands have received every attention many European rheumatologists and orthopedic surgeons have for long addressed this problem The names of some of the pioneers in this subject during the 1950S and 60S will be familiar EGL Bywaters and A St Dixon in Great Britain WS Vainio in Finland K Tillmann in Germany AS Denis and S Braun in France Further one should not ignore the considerable contribution to our knowledge of podology provided by the Monographies de podologie published by Masson under the supervision of Lucien Simon and his team at Montpellier some ten volumes in all
