 developed a methodological guide to reduce water and carbon footprints in banana plantations worldwide Members of the  
 Working Group WG on Sustainable Production Systems and Environmental Impact acknowledged the contribution of banana  
 production in the total global GHG emissions and the consumption of freshwater in the economic activity both stressed in the  
 2015 Paris Climate Conference COP21 having the agricultural sector a high mitigation potential Therefore the WG wishes to  
 contribute to the global fight against climate change and promote the sustainable use of natural resources developing  
 practical tools to strengthen the efforts of the global banana industry to reduce its carbon and water footprint CWF Since  
 banana farmers are struggling to adapt to climate change the project aims to mainstream and support the adoption of best  
 climate smart practices and efficient water management in the banana value chain as part of the environmental strategy of  
 organizations Efforts to promote CWF reduction programs in the banana industry are still incipient and carried out mostly by  
 multinationals due in part to the implementation costs the complexity of the topic for farmers the lack of user friendly tools to  
 measure them efficiently and that is still a B2B driven strategy not yet recognized by consumers Even though the need for

supporting carbon and water footprint analysis CWF in the banana industry remains strong there is still an apparent lack of sufficient financial incentives by both the governments and the global market
