**Ecology and Conservation of Great Plains Vertebrates** Fritz L. Knopf, Fred B. Samson, 2013-04-17 The frontier images of America embrace endless horizons majestic herds of native ungulates and romanticized life styles of nomadic peoples The images were mere reflections of vertebrates living in harmony in an ecosystem driven by the unpredictable local and regional effects of drought fire and grazing Those effects often referred to as ecological disturbances are rather the driving forces on which species depended to create the spatial and temporal heterogeneity that favored ecological prerequisites for survival A landscape viewed by European descendants as monotony interrupted only by extremes in weather and commonly referred to as the Great American Desert this country was to be rushed through and cursed a barrier that hindered access to the deep soils of the Oregon country the rich minerals of California and Colorado and the religious freedom sought in Utah Those who stayed for lack of resources or stamina spent a century trying to moderate the ecological dynamics of Great Plains prairies by suppressing fires planting trees and exotic grasses poisoning rodents diverting waters and homogenizing the dynamics of grazing with endless fences all creating bound an otherwise boundless vista arises in Historically travelers and settlers referred to the area of tallgrasses along the western edge of the deciduous forest and extending midway across Kansas as the True Prairie The grasses thinned and became shorter to the west an area known then as the Great Plains

Wohl, 2013-06-15 In *Wide Rivers Crossed* Ellen Wohl tells the stories of two rivers the South Platte on the western plains and the Illinois on the eastern to represent the environmental history and historical transformation of major rivers across the American prairie Wohl begins with the rivers natural histories including their geologic history physical characteristics ecological communities and earliest human impacts and follows a downstream and historical progression from the use of the rivers resources by European immigrants through increasing population density of the twentieth century to the present day During the past two centuries these rivers changed dramatically mostly due to human interaction Crops replaced native vegetation excess snowmelt and rainfall carried fertilizers and pesticides into streams and levees dams and drainage altered distribution These changes cascaded through networks starting in small headwater tributaries and reduced the ability of rivers to supply the clean water fertile soil and natural habitats they had provided for centuries Understanding how these rivers and rivers in general function and how these functions have been altered over time will allow us to find innovative approaches to restoring river ecosystems The environmental changes in the South Platte and the Illinois reflect the relentless efforts by humans to control the distribution of water to enhance surface water in the arid western prairie and to limit the spread of floods and drain the wetlands along the rivers in the water abundant east *Wide Rivers Crossed* looks at these historical changes and discusses opportunities for much needed protection and restoration for the future

Ecosystem Approaches to Landscape Management in Central Europe J.D. Tenhunen, R. Lenz, Ralph Hantschel, 2001-01-25

The challenges in ecosystem science encompass a broadening and strengthening of interdisciplinary ties the transfer of knowledge of the ecosystem across scales and the inclusion of anthropogenic impacts and human behavior into ecosystem landscape and regional models The volume addresses these points within the context of studies in major ecosystem types viewed as the building blocks of central European landscapes The research is evaluated to increase the understanding of the processes in order to unite ecosystem science with resource management The comparison embraces coastal lowland forests associated wetlands and lakes agricultural land use and montane and alpine forests Techniques for upscaling focus on process modelling at stand and landscape scales and the use of remote sensing for landscape level model parameterization and testing The case studies demonstrate ways for ecosystem scientists managers and social scientists to cooperate
