The ecology and management of African wetland vegetation Patrick Denny, 2012-12-06 Interest in the biology of African wetlands was initiated in the last century with the hypothesis that Lake Tanganyika was once part of a Jurassic sea and was furthered by Cunningham's expedition at the beginning of this century which proved that it was not. In the late 1920s ecological studies encouraged by the growing importance of inland fisheries were started by British, French and Belgian biologists. Some twenty years later several government limnological research centres and fishery departments were established in tropical Africa and scientific progress was accelerated. Scientific collaboration between the regions south of the Sahara was started formally in 1951 by the Scientific Council for Africa and stimulated by the International Biological Programme 1964-74 with its emphasis on biological productivity. Some of its interests were taken on by SCOPE which recently selected continental wetlands as a Special Project hence this book. The five authors with Patrick Denny as editor have made a very valuable contribution both to science and to the management of Africa's natural resources. They have filled a gap in the synthesis of knowledge about Africa's environments which is long overdue. The term wetland is used today in several different contexts. For this purpose it excludes the seas and large open inland waters which are too deep for rooted plants but includes the huge areas of floodplains and dambos which may change seasonally from standing water to very dry lands.

Northern Forested Wetlands Ecology and Management Carl C. Trettin, 2018-12-19 Forested wetlands are a major component of northern landscapes important both for their ecological functions and their socioeconomic values. Historically these lands have been used for timber and fiber products, hunting, fishing, trapping, food gathering and recreation. There are many questions about the use and management of these lands in the future particularly with respect to forest products, hydrology and water quality, plant and wildlife ecology, landscape dynamics and wetland restoration. Northern Forested Wetlands Ecology and Management provides a synthesis of current research and literature. It examines the status, distribution and use of these wetland resources. The book focuses on understanding the role of wetlands in the landscape and on how to manage these wetlands and sustain their important functions. This is a primary reference text for the study and management of northern forested wetlands providing a forum for information discovered by researchers and managers from many nations.
