Tim S. Campbell, 1982 *Regulatory Transformations* Bettina Lange, Fiona Haines, Dania Thomas, 2015-09-10 The issue of whether transnational risk can be regulated through a social sphere goes to the heart of what John Ruggie has described as embedded liberalism how capitalist countries have reconciled markets with the social community that markets require to survive and thrive This collection located in the wider debates about global capitalism and its regulation tackles the challenge of finding a way forward for regulation It rejects the old divisions of state and market citizens and consumers social movements and transnational corporations as well as economic and social regulation Instead this rich multidisciplinary collection engages with a critical theme the idea of harnessing the regulatory capacity of a social sphere by recognising the embeddedness of economic transactions within a social and political landscape This collection therefore explores how social norms practices actors and institutions frame economic transactions and thereby regulate risks generated by and for business state and citizens A key strength of this book is its integration of three distinct areas of scholarship Karl Polanyi's economic sociology regulation studies and socio legal studies of transnational hazards The collection is distinct in that it links the study of specific transnational risk regulatory regimes back to a social theoretical discussion about economy society interactions informed by Polanyi's work Each of the chapters addresses the way in which economics as well as economic and social regulation can never be understood separately from the social particularly in the transnational context Endorsement This thought provoking collection asks the most critical question of our time how to civilise markets through social accountability and political action The climate and financial crises we face show how crucial this challenge is Lange Haines and Thomas have put together a series of fruitful case studies of the possibilities for embedding economic relationships in social relationships by a series of top class researchers within their own illuminating and sensitive framing of the issue Professor Christine Parker Professor of Regulatory Studies at Monash University *Corporate Governance, Financial*

Markets and Global Convergence Morten Balling, Elizabeth Hennessy, Richard O'Brien, 2013-11-11 for many years been heavily dependent on bank financing and this situation has not changed fundamentally In his paper on stock exchange governance in the European Union Guido Ferrarini discusses the relative merits of member and investor ownership and compares stock exchange regulation in a number of EU countries Faced with increasing competition amongst themselves and against other enterprises that offer transaction services such as proprietary trading systems it is essential for European stock exchanges to improve their efficiency and to generate volume Large investments in new information technology are necessary in order to preserve competitiveness in a global financial market The implementation of the ISD has accelerated cross border transaction activity of member firms and investors and strengthened the pressure for convergence of national stock exchange laws in the EU In their paper Francesco Giavazzi and Marco Battaglini look at the role played by banks in privatization processes Banks can be involved in such processes in several ways They may themselves be the objects of privatization since in many countries a significant fraction of the banking industry is publicly owned This is the case in France Spain and Italy But banks can also be important buyers of the equity of industrial firms sold by the government if they are allowed to do so The authors characterize privatizations as a very good opportunity to set up the right environment for the development of new financial intermediaries and in general for a sound corporate governance system
