**Economic Perspectives on Acid Deposition Control** Crocker TD Ed, 1984      **Acid Deposition: Environmental, Economic, and Policy Issues** Donald Adams, 2012-12-06 Concern about acid deposition commonly referred to as acid rain as a widespread pollution problem with severe ecological consequences has heightened public awareness Many authorities fear that acid deposition may be the worst environmental crisis of our industrialized society because of both the global implications and possible widespread irreversible damage to lakes soils and forested ecosystems Neither state nor international boundaries are exempt from the transport and deposition of airborne pollutants resulting from local and distant emission sources The dilemma and debate will continue as long as society requires fossil fuels for its energy needs without regard to emission constraints This book started as a modest attempt to provide a status report on atmospheric transport the chemical processes which produce acidifying agents and resultant ecological and economic consequences The materials in this book have been substantially revised from those presented at the conference in 1983 It became obvious that additional chapters were required when sudden and profound changes occurring in European forests were reported It is felt that perhaps such damages could be an early warning to forested ecosystems in the northeastern United States and Canada as well as other places throughout the world Most importantly it is essential that gained scientific knowledge be translated into required legislation a section on Policy Issues was incorporated to address these concerns It is hoped that the reader will become informed and concerned enough to be involved in the global debate Donald D Adams Halter P      *Acid Rain Economic Assessment* Paulette Mandelbaum, 2013-11-21 This volume Proceedings of the Conference ACID RAIN Economic Assessment is meant to present the areas of agreement which economists have established and the uncertainties which they have discovered in their attempts to use the methodology of economics to better understand the nature of the acid rain issue Scientific articles about acid rain initially appeared in 1972 The public turned its attention to the issue in the mid 1970s In April 1979 the first acid rain bill was introduced in the Senate authored by New York's Senator Daniel P Moynihan The bill sought to establish a federal research program dedicated to filling the gaps in understanding of the phenomena of long range transport of air pollutants and their environmental health and economic impacts The bill was passed into law in 1980 Since then tens of bills have been proposed to control emissions of SO<sub>2</sub> and NO<sub>x</sub> thought to be the precursors of acid rain And yet in contrast with the pattern set by the majority of environmental issues where legislation followed very quickly on the heels of public anxiety and involvement by July 1985 not a single federal acid rain control bill had been passed      **Energy Abstracts for Policy Analysis**, 1986      **The Acid Rain Debate** Ernest J Yanarella, Randal H. Ihara, 2019-07-11 This collection of essays by noted academicians lawyers energy agency administrators and research analysts focuses on the

political and legal aspects of the acid rain debate the policy options for resolving the controversy and the international dimensions of acid rain control The contributors highlight concerns drawn primarily from the developing study of acid rain in political science economics public administration and policy analysis concerns that are the focal point of the public debate over the nature impact and cost of acid rain and the mitigation of its effects The book complements the impressive body of research from the natural sciences and responds to the need for applied study to help resolve the current policy stalemate on this critical environmental issue The Acid Rain Debate features a comprehensive annotated bibliography on acid rain and relevant social science research      **Selected Water Resources Abstracts** ,1986      Acid Precipitation ,1984

*Handbook of Law and Economics* A. Mitchell Polinsky,Steven Shavell,2007-11-07 Law can be viewed as a body of rules and legal sanctions that channel behavior in socially desirable directions for example by encouraging individuals to take proper precautions to prevent accidents or by discouraging competitors from colluding to raise prices The incentives created by the legal system are thus a natural subject of study by economists Moreover given the importance of law to the welfare of societies the economic analysis of law merits prominent treatment as a subdiscipline of economics Our hope is that this two volume Handbook will foster the study of the legal system by economists The two volumes form a comprehensive and accessible survey of the current state of the field Chapters prepared by leading specialists of the area Summarizes received results as well as new developments      Bibliographies and Literature of Agriculture ,1986      **The Handbook of Rational Choice Social Research** Rafael Wittek,Tom A.B. Snijders,Victor Nee,2013-06-05 The Handbook of Rational Choice Social Research offers the first comprehensive overview of how the rational choice paradigm can inform empirical research within the social sciences This landmark collection highlights successful empirical applications across a broad array of disciplines including sociology political science economics history and psychology Taking on issues ranging from financial markets and terrorism to immigration race relations and emotions and a huge variety of other phenomena rational choice proves a useful tool for theory driven social research Each chapter uses a rational choice framework to elaborate on testable hypotheses and then apply this to empirical research including experimental research survey studies ethnographies and historical investigations Useful to students and scholars across the social sciences this handbook will reinvigorate discussions about the utility and versatility of the rational choice approach its key assumptions and tools      *The Economics of International Trade and the Environment* Amitrajeet A Batabyal,Hamid Beladi,2001-02-07 Issues related to environmental protection and trade liberalization have moved to the forefront of international policy agendas The Economics of International Trade and the Environment explores from an economic standpoint many of the questions that are germane in increasing our knowledge of environmental policy in the presence of international      *The Protection of Ground and Surface Waters, January 1982-August 1987* ,1988      **The Brundtland Challenge and the Cost of Inaction** Royal Society of Canada,Institute for Research on Public Policy,1988 From the back cover Environment is now at the top of the public agenda This publication reports on two

workshops held in early 1988 to discuss aspects of environmental issues. The workshop members were drawn from a number of professions and came with wide experience. They were much concerned about environmental issues and determined to recommend action on them. Accordingly, they refused to be constrained by workshop titles or fixed agendas and ranged widely over a number of important questions. These included the basic nature of the environmental issue, the apparent failure over the past couple of decades of our decision making processes and institutions in attacking the causes, why have we not done better and the reasons for that, and what now must be done. They ended with a series of recommendations which set out the results of their best thinking at that time.

*Methods for Valuing Acidic Deposition and Air Pollution Effects* Gardner Mallard Brown, John M. Callaway, R. M. Adams, 1990

Acidic Precipitation H.C. Martin, 2013-11-11

Since the beginning of the 1980s, research has continued to clarify and improve our understanding of the problem of the ecological impact of acidic precipitation. From September 15-20, 1985, Canada convened the Muskoka Symposium on Acidic Precipitation to review progress and help chart the direction of future studies. The Conference was held in central Ontario, Canada, a region of heavy sulphate deposition where aquatic effects are evident. Approximately 700 people attended, over 500 of whom were research scientists. Over 400 papers were presented. Nearly 200 of the papers are included in these proceedings, which together give the present state of the art of acid rain research. The Conference focused on atmospheric science and aquatic and terrestrial effects. I have made some general observations on progress in clarifying issues and linkages between these areas of research. Outstanding issues which require a great deal more work are identified. These are my views, influenced by personal bias and limited by my expertise.

Atmospheric Sciences: Three aspects were covered: measurement techniques, the actual measurements, and source-receptor relationships.

Environmental and Natural Resource Economics Timothy C. Haab Ph.D., John C. Whitehead, 2014-03-28

Accessible to students and practitioners without an advanced degree in environmental economics, this essential reference work pinpoints the role of the economy in both creating and solving many of the world's most pressing environmental challenges. Given the number and scope of environmental problems we face today, everyone from high school students to policy makers to concerned citizens should understand how the economy works and grasp how meltdowns, both economic and environmental in nature, can be avoided.

*Environmental and Natural Resource Economics: An Encyclopedia* offers the critical information needed to comprehend these complex issues. The entries cover topics in a manner parallel to how environmental economics is commonly taught, addressing basic concepts, environmental policy, natural resource economics, market failure, exhaustible and renewable resources, benefit-cost analysis, and applied welfare economics. Additionally, the book includes entries on key concepts, economic movements, events, organizations, important individuals, and research areas relevant to the study of environmental and natural resource economics. This work stands alone as the only title currently offering such a breadth of coverage and level of detail, written specifically for readers without specialized

knowledge of environmental economics      **Atmospheric Acidity** Miroslav Radojevic, Roy M. Harrison, 1992-12-31 This is the first publication to offer a comprehensive and balanced view of atmospheric acidity It is organised in three sections The first part consists of reviews of sources of acidic compounds the second part outlines the environmental consequences and the final part discusses the technological legal and political aspects of control strategies
